Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Aircraft fuselage broke behind instrument panel. Landing gear collapsed upon impact 		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible. At approximately 1730 local time while cruising at 4500ft msl I experienced a complete engine failure. At the time, I was flying in formation with another aircraft. I radioed to him I was having engine trouble. He proceeded to locate the closest airfield to our present location. It was a grass strip 6 miles away. In the present condition, I knew that distance was not possible. I attempted to troubleshoot the problem by activating the manual 'wobble' pump in the aircraft, and adjust the mixture control and throttle. None of those options brought back power to the aircraft. I then concentrated on making an attempt to find a suitable place to set the aircraft down. The only reasonable option at the time was state road 35 south of Sabago Lake. I set up a glide to land on a southeast heading on the road. At approximately 500ft agl I spotted 4 vehicles traveling along the road opposite of my direction. Because of the overhanging trees, I assumed they would not be able to spot me, and thus their reaction time to avoid an impact would be drastically decreased. Upon passing the trees, yet still about 30-40 ft in the air, I attempted to extend my flare distance to just past where the vehicles were positioned. At around 20ft agl, the aircraft airspeed had decreased below what would be necessary for a normal power off flare to a landing. The aircraft landed extremely hard and was substantially damaged. The aircraft slid approximately 80-100 feet off to the side of the roadway and stopped in a ditch. All 4 vehicles stopped to assist me with egressing the aircraft. I was not trapped in the aircraft so extraction was normal. EMS and CFR services arrived within minutes. My only injury was a small cut on my left hand. I was taken by ambulance to Maine Medical Center in Portland for treatment and was released within an hour. The fuel state of the aircraft was between 10-13 gallons of fuel in the main tank from which the engine was receiving fuel at the time of the failure and approximately 5-8 gallons in the upper wing tank. Our fuel stop at Sanford was approximately 10 minutes away. The elapsed flight time at the time of engine failure was 1:50 (one hour, 50 minutes).		

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

At this time, is it unknown exactly what caused the engine failure so no recommendation can be suggested.
