NTSB Accident/Incident No. ERA15CA083	Reviewed by NTSB Regional Office AS-ERA	Name of Investigator H. Moats	Date Report Received 1/14/2015
--	--	----------------------------------	-----------------------------------

Please accept this correspondence as a summary of the events of Friday, December 26, 2014 regarding N6063F in response to your request of December 30, 2014.

Regarding ownership of the aircraft, Air Logistics, LLC is a Tennessee limited liability company formed in June 2014 for joint ownership of the aircraft. I have attached a copy of Minutes of the Organizational Meeting of Air Logistics, LLC showing my ownership of a membership interest of one-third of the LLC, which owns the aircraft.

Regarding the events of December 26, 2014 at KJWN, I first noticed inconsistent brake performance on the left brake in September 2014. I reported the problem to a mechanic and maintenance was performed on several occasions (9/15, 10/15, 11/5 & 12/18) with subsequent testing of the brakes and return of the aircraft to service by the mechanic.

On December 26, 2014, I performed a pre-flight inspection. Notably, the airplane rolled freely, and no fluid was observed on the ground near the wheels. Prior to take-off, I performed a number of turns and applied differential and combined braking to test the brakes as I taxied and in a clear area of the ramp at the south end of the field. Pedal pressure was equal and the brakes and steering performed normally. During run-up, the brakes held with normal pressure applied. The airplane rolled freely when the brakes were released. I taxied into position and took off with no indications of any braking or steering performance issues.

I flew VFR to KBWG. I performed a touch-n-go landing, which did not require the use of brakes. I flew VFR back to KJWN. The conditions were VMC and the runway was dry. There was very little wind out of the south. I made a stable approach to runway 20. Melissa Riley is a flight instructor at KJWN who was sitting in an aircraft waiting to depart. She witnessed the approach and landing and commented to me that my approach and landing looked exactly as they should. I roughly estimate that I first applied the brakes approximately 400 feet after touch

down. I applied the brakes lightly because I had plenty of runway remaining and my touchdown speed is relatively slow in a Cessna 182. Upon applying the brakes, the aircraft abruptly veered left and departed the runway near the corner of the first taxiway (A3). The aircraft continued through the grass toward the taxiway. When the nose wheel encountered the higher taxiway pavement surface, the nose wheel separated from the strut. The aircraft bumped across the taxiway surface on the nose strut and main wheels. After crossing the taxiway, the aircraft strut dug into the dirt and the aircraft flipped tail over nose coming to rest inverted. I exited the airplane. I sustained no injuries. No airport lighting or other airport property was damaged. No passengers were aboard.

Sincerely,

A black rectangular redaction box covering the signature of Tom French.
