☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Aircraft right and center landing gear destroyed. Right wing strike. Left wing damage. Prop strike.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 1/18, Prior to leaving KHSV I had to get my aircraft jumped off due to battery being too low to start. During flight, I checked the amp meter to see if load was heavy which typically indicate still charging the battery. After about 10 to 15 minutes of flying the amp meter was down to the normal operating levels. I landed at my normal rest/fuel stop for the flight KALX. I pulled into fuel and set the parking brake as normal. After grounding the aircraft a gentleman came by and asked if I needed the courtesy car to grab something to eat. I assumed he was working in the hanger close to the pump that had the door cracked open. I declined and stated that I am fueling and getting home to the family. After fueling was complete, I hung up the pump and disconnected the ground. I attempted to start the airplane. The battery too weak to crank. I checked the parking brake once more and got out to look for my portable jumpbox in the storage compartment. It wasn't onboard. I then proceeded to look for the gentleman from earlier. I walked to all three hanged areas searching for someone to assist in starting. I then went back to the airplane and set the fuel mixture to full, cracked open the throttle about 10 percent, pumped about 8 to 10 pumps of fuel into system, turned key to full, checked brake and attempted to prop start twice to no avail. I checked these items again and once again attempted a prop start. The airplane failed to start or even sputter. I assumed I flooded the system. One way I recalled clearing a flooded system in a normal strong battery system was to set mixture off, set throttle to full, set batt and alt switch to on, and to attempt to start with both magnetos. With no battery, I turned off the magnetos, check the brake, and ensured that the batt and alt switches were off. To me this will eliminate spark from the fuel - air- spark starting must have. I got out of the aircraft and prior to touching the prop visually looked in to check that the key wasn't in the full on position (pointed slightly towards me). I stood in front of the prop and turned it. A puff of smoke came out of the exhaust and the blades started spinning wide open. Took me a second or so to process what was happening. I immediately moved from in front of prop. I then thought the brakes are on don't worry. then I noticed the aircraft was moving forward and picking up speed. I was in front of the right wing and ran to grab hold on door and try to hop on wing and into the aircraft to stop forward motion. I could not get a grip on door which the wind from the prop was pushing shut. After failed attempts the aircraft had picked up more speed and I was stuck in front of the wing starting to get dragged along. I immediately thought of the rudder position pulling into parking and the Jet aircraft and hanger that would be in a left rudder path. I determined while already half running and half getting dragged to try to alter the plane's path as to not hit any other people's property. Once aircraft was heading in the direction of the ditch and past the hanger on the right, I had to let go. I pulled arm from top of wing and was immediately sucked down to the ground. I could feel the aircraft wheel attempted to run over the rear of my head but could not roll over. It dragged me along for a few feet and then finally rolled over my head. I immediately jumped up and watch the aircraft's prop make contact with the ditch and right wing slam the ground. I was bleeding from head, shoulder, and both hands. I called my wife and then 911 for assistance.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

- replace battery as soon as signs of distress on earlier flights
- learned the location of the courtesy car keys
- ensure jump box is onboard
- chalk both wing wheels
- call a cab and wait until the next day.
- call airport emergency line
- Never attempt single person prop start

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Battery not holding charge
