Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing outboard wing tip area was bent up. Left side tire rim was damaged, tire did not deflate. Slight "scuff" to very outboard tip of the left elevator.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We took off from runway 36 and stayed in the pattern for touch and go landings and takeoffs. On the first landing we rolled out and had slowed to a fast taxi speed, intending to slow to taxi speed before takeoff. All three tires were on the ground. At this time the student drifted left of centerline and attempted to correct back to centerline. He ended up drifting further left and ended up on the left side of the runway. At this point I attempted to establish control of the aircraft calling "My flight Controls". He then put in an abrupt right turn control input of the rudder and possibly the brake. This aircraft has heel brakes and he may have accidentally pushed some brake. I believe he hit the brake due to the abrupt turn. The student stayed on the controls too long and I was unable to stop the aircraft from turning hard right. This turn caused the left wing to lower and contact the ground. We came to a stop 180 degrees on the runway. Initial damage assessment indicated we had an aircraft able to taxi and neither pilot was injured. We taxied off the runway onto ramp. Post event review showed what appeared to be wing tip area damage only along with wheel hub and scuff to left outboard tip of elevator. Subsequent contact with local FSDO and FAA Maintenance found the damage qualified as an accident requiring a report.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

I am at a loss as to how this could have been prevented other than possibly not giving primary instruction in a tail dragger. The student had made good progress to this point and this was the first time he had made an abrupt incorrect input for several lessons.
