Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing tip end damaged and right horizontal stab. Wing tip was damaged by tree limbs taking off a portion of the fiberglass tip. Right horizontal stab was damage by a tree limb leaving a gash in the stabilizer approximately 8 inches from the fuselage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

My Friday morning started out with preparing for two trips from Hendersonville to Collagedale TN flying over with my wife first while my step son was in school. Then coming back and getting him after school. Fourty Five minutes to there each way would be more enjoyable and less time that driving five hours each way.

My Cessna 150 is based at my home. I washed and inspected the plane checking oil and fuel, there was 10 gallons in plane. I added 10 gallons for a total of 20 gallons. My wife and I decided to take a more southern route to our destination, Collagedale, TN. We stopped at Habersham County Airport. While there we decided to get fuel. In check the fuel I had 13 gallons so I purchased 10 gallon for a total of fuel 23 gallons. Time of fueling was 12:45 PM eastern time.

We flew on to Collegedale TN arriving at 2:30 PM I dropped the wife off. I checked fuel and had 16 gallons on board. I took off at 3:00 PM and at 3:30 PM had engine failure. I got the engine restarted and climbed to 1000 feet. At that point it failed again. I set up for an emergency landing and got the engine to restart again. I flew on for approximately five minutes and the engine quit again. This time it would not restart. I set up for a landing in a field in Balsam, NC. Once safely landed I checked the fuel in the left tank. It was empty. Right tank was half full (10 gallons) of fuel.

Some gentlemen came out to check on me and offered to help. I asked for a siphon hose so I could pull out the fuel from the right tank. Instead the gentlemen came back with 7 gallons of fuel. They were willing to go and get more but I felt that would be enough. I wanted to keep the plane light so I could safely get off the ground. The local fire department and state highway patrol blocked off traffic on NC215. I ran up the engine. It ran fine. Another couple drove me down the road so we could see how much room there was to take off on the straight part. There was approximately 1500 feet.

I decided to depart to the west. The field is in a valley to the east is mountains, west is a valley. Upon departure I encountered a sudden cross wind, already committed I had no choice but to continue. The plane veared slightly to the left and I clipped some tree limbs. The left wing tip and tail sustain damage but did not hurt the ability to continue on to my destination.

When I secured the aircraft at my home airstrip in Hendersonville, I called the local FAA office and they were closed. The local fire department came by to verify that I had landed safely. I got a phone number from the Transylvania County Emergency Response for the FAA and spoke to them. I met with them on Monday Morning 5/11/2015. I contacted a certified aircraft mechanic and found out there was a problem with the vent tube. When we drained the fuel there was 16 gallons of fuel left in the plane.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The accident could have been prevented by not taking off from this location.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Vent tube on fuel tank was blocked and would not allow proper flow of fuel.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Owning and operating an over the road trucking company I am very aware that safety comes first. The malfunction of the aircraft was an unknown issue with the fuel feeding system. I have always put safety first. The lives of my family and myself depend on it. I fly this craft out of my home airstrip with similar terrain issues. Encountering a crosswind on takeoff is why the aircraft was pushed towards the trees. I understand that if I had not of been the pilot that I am the situation could have been a lot worse. I was able to set the craft down safely when I did encounter the engine problems. I was also able to fly the aircraft when encountering issues on takeoff.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
