Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

START 67

Aircraft was totaled by Insurance adjuster. Damage included, but may not be limited to, Main Gear (Sprung), Fire Wall (wrinkled), Windshield (Cracked), Right Wing Tip (Tore off by Fencing), Left wing (impact damage from fence post), upper fuselage and door frame (from wing being forced backwards) and bottom of fuselage (dent from log struck) END 68

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

START A

Giving two student's their first lesson with one student in left front seat and second student in rear right seat. After 20 minutes of taxiing instruction, we departed the airport and flew for 20 minutes, remaining within 3 miles of the departure point. Returning to land, while on final, advanced power because aircraft was low (less than 200') and discovered the engine had lost all power. Aircraft was beyond gliding distance to the runway so I made a 20 degree right turn and landed on a paved road located a quarter of a mile short and just to the right of extended runway center line. Had to cross a 7 foot high fence to make the road. Cleared the fence and subsequently stalled the aircraft between 10 & 15 feet. Made hard landing on center line of road. Road had a gentle curve to the right and I was unable to keep the aircraft on the road. Aircraft went off the road on the left side, struck a 6" pine log lying on the shoulder which pulled the aircraft further left. Aircraft left wing made contact with the 7 foot fence that paralleled the road. Wing tip then made contact about 12 inches inboard of wing tip with a large wooden fence post that caused the aircraft to ground loop to the left. Aircraft came to a stop and I immediately shut off fuel, pulled mixture and turned master switch and ignition switch off. All occupants exited through the right door as the left door was jammed against the damaged wing.

FAA investigators discovered a quantity of water in the right tank & the gascolater was full of water. Subsequently discovered the right wing tank cap seal was bad. That and combination of recessed fuel caps and sitting outside for several days of rain showers explained the source of water.

Gave an extensive pre-flight demonstration to the two students. During preflight I drained all sumps but did not notice that the clear "fluid" drained from the right wing was all water. This was my first flight in this aircraft for new owners and preflight was during a light drizzle from a rain shower that had just passed. I did not remove or examine the fuel caps as I did not want to allow the water trapped in the cap recess to get into the tank. I noticed that the "Fluid" from the right wing wasn't proper color but attributed this to auto-fuel that had been used previously. Smelled the "fluid" and it had the odor of Auto-fuel. Obviously, when I drained the fuel sampler, I didn't notice any water droplets remaining in the sampler. I did notice on the gascolator that the fuel was blue but still had an auto-fuel odor. Oddly enough, when I drained the left tank, I intentionally caught water dripping off the flap to show the students what water looked like in a fuel sample. END 67

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

START

Personal Conclusion & Lesson Learned: If it ain't BLUE, don't fly and ALWAYS confirm the fluid in the sampler is FUEL by looking for water droplets after emptying and checking for surface tension of fluid. I never liked auto-fuel in aircraft anyway. Although the engine stoppage was not due to auto-fuel, I don't think I would have dismissed the fuel color had I not thought auto-fuel was still in the tanks. Also, all aircraft with the recessed fuel caps should be modified with the STC'd type that prevents water from entering the tank.

END
