

I Troy Woodland departed Just Aircraft LLC located at [REDACTED]
[REDACTED] Walhalla SC 2961 a little before 5:00 pm on August 2,
2015 with a friend Mark Cox. While doing a pleasure ride we flew
over to the lake doing some maneuvers and slow flight.

Approximately 30 or 40 minutes later the engine started to
sputter and run rough for a few seconds, that's when we started
heading back to Just Aircraft. The engine then cleaned up and
about 15 to 20 seconds later it sputter again and wasn't cleaning
back up. We were roughly 1000 ft in the air and when the engine
wouldn't come back, I kept the throttle at a full throttle and the
prop wind milling hoping that it would clean up but the engine hit
and miss as I headed for a cove, and then at tree level the engine
came back full power, but at that point it was too low to clear the
terrain and hit trees.

[REDACTED]

8-3-15

Just Aircraft had an aircraft come in that had engine trouble that we found to have water in the fuel. My workers drained the fuel from the plane and put the N # on the fuel jug.

About a month later when my buddy came by and said let's go flying I grabbed that fuel jug and put the fuel in my plane not realizing that was the fuel that had come out of that plane.
