Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Engine, propeller, airframe

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The purpose of this flight was a BFR with instructor in right seat. Winds were 10 gusting 20 but approximately on runway heading. Normal pattern was flown with correct speeds and procedures. As the plane was settling into the three point attitude for landing, the wind dropped off significantly while aircraft was still several feet above the runway. To arrest sink rate, I added power and right rudder. However, with airspeed bleeding off and rudder blanked out by the fuselage in this tail low attitude, rudder authority was inadequate to overcome the gyroscopic precession induced by the addition of power. The rudder was at the right stop. The aircraft touched down fairly softly, but pointing several degrees to the left. On rollout, with stick full back and concerned with exiting the pavement, I increased braking to prevent this. The aircraft flipped over very quickly on its back. The properly flown takeoff, pattern and approach to landing deteriorated in just a few seconds to produce this incident, as the instructor has attested.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Was too concerned with keeping aircraft from exiting the pavement, and braked too aggressively. Should have kept control of aircraft by riding it off runway and steering it back on. Also considered that I may have been less anticipatory (or inadequate) than I should have been with right rudder when power was added in order to overcome gyroscopic precession. The Instructor did state however, that the rudder was at the right stop, but I wonder if it could have been applied sooner to mitigate the leftward movement.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
