

from sound, a plane was traveling north to south direction. I heard a very loud/unusual engine sound coming from plane. I looked up in a east/southeast direction and witnessed the plane descending from the sky in a vertical direction with nose in a dive position. After a few seconds I heard an explosion, lots of black and grey smoke started reaching the building tops. Tracy Williams and myself realized the plane had crashed. I ran around the buildings for a clearer view, realizing the plane indeed crashed, I called 911. At that time all I seen was smoke. Estimated time was 9:15-9:30 am

1/22/15

I was facing east when I heard a loud engine noise of an airplane that was traveling from north to south. The engine noise grew louder as the plane descended nose first to the ground. I heard an impact noise and smoke immediately followed.

I then called 911.
