Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Complete destruction: appanage completely separated from fuselage, fuselage severed from cabin compartment, severe damage to left and right wings, canopy removed, windshield fractured, one prop blade sheared off, other bent.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On Thursday, July 23, 2015 prior to departure from home at approximately 8:30 am I phone FSS to obtain a weather briefing and file a VFR flight plan from W13 to KVSF with an intermediate stop at KMSV. I obtained a weather briefing from FSS and filed two flight plans; one from W13 to KMSV and another from KMSV to KVSF.

I arrived at W13 approximately 10 am, loaded the plane and did a pre-flight inspection of the plane. I then pulled the plane out of the hanger. We got in the plane, I started the engine and taxied up to the fuel pump to fill the fuel tanks. I noted on numerous occasions that the wind sock was showing no wind and hanging limp. The FBO filled the main tanks (39.5 g capacity) and filled the aux tank (20 g capacity).

I started the engine again at approximately 10:45 am for the departure. I turned on my GPS tablet and loaded the route while allowing the engine to warm up at approximately 1,000 rpm. Using the check list, I went through the pre-flight check. With the brake on, I throttled up to approximately 1700 rpm and switched to the right magneto, observed an approximately 60 to 70 rpm drop, back to both and then to the left and observed a 60 to 70 rpm drop and returned to both. I advanced the throttle forward to a higher rpm of approximately 1900 to 2000 rpm and cycled the prop twice and observed a drop in rpm. I retarded the throttle and completed the check list. I released the brake, looked for traffic, rolled out on Runway 24, announced departure and advanced the throttle fully. During the roll I pulled the yoke back slightly to take pressure off the nose wheel and at about 65 mph the plane lifted off pretty much on its own. Once airborne, I leveled off briefly to increase airspeed to 70 mph (Vx). I then pulled the yoke back slightly to increase my altitude and my airspeed dropped to about 65 without appreciable gain in altitude. I then noticed the approaching trees at the end of the runway. I tried to go between the trees but the right wing struck a tree and the next thing I remember is being upside down, under water in the farm pond adjacent to the airport. I reached up for the canopy handle but couldn't find it, I reached over to my wife to unbuckle her belt but she wasn't there, so I unbuckled my seat belt and popped to the surface on the passenger side of the plane. I found my wife standing in the waist deep water and we waded to the shore with a few of the floating objects.

RECOMMENDATION (How could this accident/incident have been prevented?)
