MEMORANDUM FOR RECORD

FROM: MARTIN D. ISLER [REDACTED] (CFI)

SUBJECT: N4631J ACCIDENT DATED 20150723

1. July the 23rd my Student Alberto Cabrera and I started commercial flight training at approximately 12:00 local. After finishing with the ground portion we got ready for the flight on a PA-28R-180, registration N4631J.
2. I conducted a thorough Pre-flight inspection in accordance with the manufacturer's operating procedures. All preflight items met or exceeded the manufacturer's limitations. Approximately 13:45 LCL we were requesting clearance and started taxing procedures.
3. During the pre take-off checks all systems functioned properly.
4. After conducting safety training maneuvers for about 1.8hrs , 30NM from KFXE, was time to head back to the KFXE airport from where we departed. Systems were functioned properly at all times We had approximately 2.5hrs of fuel on the tanks to come back.
5. After the last maneuver 'stall' we began Pre-Landing checks and noticed an error in the system. Gear on Transition Light was ON .
6. Extending the gear down , we got the nose gear green light indication OFF . The two lights in the main gear was ON and gear on transition caution warning (Yellow) was ON.
7. I did the Emergency landing gear extending procedure according the manufactures operation handbook, and the nose gear green light still OFF . I made contact with company operations and informed the chief pilot of the issue.
8. Coming back to the airport I knowledge to ATC and requested a low pass (Rwy 13) to let them check my nose gear. ATC said 'Landing gear appears not locked' .
9. Going back NW form the field I tried one more time Emergency Landing Gear Extension , and this time it works , giving me a Green light on the nose (3 greens Total) . But I got a left YAW tendency to the left , left rudder control was all the way in (pushed in) . To keep the plane flying straight (coordinated) was necessary to apply abnormal right rudder pressure.
10. Making a second decision to do a low pass, ATC and Skyeagle Team informed that 'nose gear appears to be locked but not straight, looks deflected to the left'.
11. After 1.5 hrs of flying and doing procedures I end with two options. 1) Gear up landing or 2) land with the gear down and locked but not straight , knowing that I was going to have strong forces pushing the plane to the left side.

12. I made the decision to land with the gear down. I prepared my student with safety instructions for the landing. I performed a Soft field landing holding the nose as much I can to avoid strong forces pushing me , but rudder was deflected to the left making the plane turn. Nose was gently coming down as we were rolling out of the runway, crossing to a grass section and ending in a taxiway, left side of Rwy 13 at KFXE.
13. As soon I touch down I secured the engine to avoid any fire, damage or propeller strike.
14. Alberto Cabrera and I walked out of the plane without any injury and no property damage. The aircraft was undamaged during the landing.
15. All my decision and procedures that I performed was based on my pilot experience (ADM) and following at all-time checklist procedures.
16. I certify that my statement is true and complete.

MEMORANDUM FOR RECORD

FROM: Alberto Cabrera

SUBJECT: N4631J ACCIDENT DATED 20150723

We were coming back after we finished some maneuvers, when we realized that the landing gear transition light was on and the nose gear light was off, we followed the checklist and the emergency procedures but we could not get the gear down, we did a low pass so the tower and skyeagle team could tell us if the nose gear was down and locked or not, unfortunately it wasn't down and locked, we decided to go back to the practice area to do the procedures all over again, finally we get the nose gear light on, but something was wrong with the rudders, the left rudder was all pushed and stocked, we decide to go back to kfxe and do another low pass to confirm the condition and position of the nose gear, after doing the low pass, they told us that the gear was down and locked, but it was deflected to the left after several minutes, we decided to land the plane, and my instructor gave me the emergency indications, and he told me what we were going to do, he landed the plane so smooth and he did the best for our safety. No personal or material damage was done, we both are fine.
