Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

I don't actually know of the damage to the aircraft as I never saw it after the accident, but I assume the aircraft was destroyed due to impacting the ground twice. I have been told that the pressure vessel was wrinkled.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This accident terminated flight began on 08/01/2015 at 2:50 CDT from Red Lake (CYRL) Ontario, Canada to Duluth, Mn. (DLH) to clear U.S. Customs, then on to Dayton, OH(DAY) to drop two passengers, then the final leg to Somerset, Ky (SME) where the airplane is based. Fuel quantity was checked by fuel gage at CYRL and was determined to have about 1100 lbs. of fuel in the tanks. Fuel was ordered and 560L (about 150 gal.) was pumped into the outboard tanks. No problems were encountered on this leg of the flight. After clearing U.S. Customs at DLH, fuel was checked by fuel gage (about 1,200 Lbs) and 140 gal was ordered and delivered to the outboard tanks. The aircraft departed DLH at about 4:50 CDT for DAY to drop off two passengers. No problems were encountered on this leg of the flight. Passengers were deplaned. The FBO was closed, so we spent sometime getting the passengers to their cars. Upon returning to the aircraft I checked the fuel quantity by fuel gage to determine if we needed to call the FBO operator out for fuel, or if we had enough fuel to make the flight home. Fuel quantity showed I had 1200 lbs of fuel in the tanks. My son (Mark A. Conrad) who was in the front with me said that he thought he saw 1400 lbs. Never the less the trip to SME would take about 40 - 45 min and would require about 360 - 410 lbs of fuel. The weather at DAY and SME was clear with unlimited visibility. I would be canceling my IFR flight plan about 12 miles out from SME and make my approach to SME under VFR rules with more than VFR fuel reserves. No fuel was ordered at DAY. Departure from DAY was about 8:30 EDT. Climb out to cruise altitude of 12,000 ft went well until the Auto Cross Feed annunciator light came on. No other indicator lights came on. I recycled the Cross Feed switch. The cross feed light went off then came back on. I wanted to put the airplane on the ground to troubleshoot the problem, especially since it was night. I requested nearest airport from ATC. I was informed that Georgetown, Ky (27K) was directly below me. At that point the right engine shut down and Auto Feathered. I knew I had a lot of altitude to loose. I planned on making a down wind pattern to runway 21 while loosing altitude, then make a standard pattern using the left engine. I pulled the power lever back on the left engine, pushed the nose over and to help loose altitude I lowered the landing gear. As the gear locked in the down position, the electrical system failed. The cockpit went dark. My son later told me that the right circuit panel was getting really hot before the electrical system went down. Now my hands were full flying the airplane and trying to figure out what was happening. I was now visually at the bottom of my descent. I pushed the left power lever forward and -- nothing. The left engine did not respond. It too appeared to be inoperative. I was slowing down and at the same time loosing more altitude. I needed to get the airplane onto the airport. I was paralleling runway 21 but couldn't make the turn to the runway because of trees between the runway and me. I found a hole and could see what I thought were the runway lights but later I found out that they were the taxi lights. I turned the airplane perpendicular to the lights. Approaching the lights I realized that the runway (taxi way) was slightly above us. I knew we were slow and if I pull up I would be giving up airspeed for altitude. I knew we had to climb. The last thing I remember is pulling up gently on the control wheel and hearing my son yell to the passengers " Brace For Impact". I don't remember anything about the crash. The next thing I remember is laying in the grass talking with a First Responder. I don't remember how I got out of the airplane. I asked my son how I got out. He said everyone was getting out after the owner kicked the door open. My son said he was headed down the isle to exit the airplane when he looked back and saw me, still seated, flipping switches and moving levers. (I would guess I was doing the shut down procedure)He said he yelled to me to " get out of the airplane or I will carry you out." He said that I got up, got off the airplane, walked away from the airplane and collapsed in the grass.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

1. Right engine failed and auto feathered
2. Electrical system failed after landing gear was lowered (current limiter?)
3. Left engine failed to produce power when power levers were moved forward at the bottom of the descent.

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No**Method of Exit** – Describe how the occupants exited and how many occupants evacuated each location

The owner of the aircraft, who was trained in door operation years ago and is familiar with the door, tried to open the door by the standard method of depressing the release button and turning the locking handle to the open position. The door would not open due to deformation of the structure. He sat on the side facing seat and kicked the door open. All occupants left the aircraft through this door. (as told to me by the owner)
