Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Floor boards and beams were displaced and damaged

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

During the flight planned on April 10, 2015 to bring the aircraft to scheduled maintenance from SVMl to KFXE, at flight level 430 with speed of 0.80M and approximately after 2 hours 15 minutes and next to start the descent to destination airport, we found an indication of red light maximum differential pressure of 9.8(CABIN DFRN - 9.8) and then the warning red message "DOOR MAIN" light ON. We put on the oxygen masks and look into QRH to read the emergency. The differential pressure indicator on the copilot side, it was also in red arc. Almost immediately, a "BAM" sound was heard in the cabin. We put the controls AUTO/MANUAL switch to MANUAL, DADC 1 selector switch to DADC 2 and landing position. We requested, from Miami ATC, an immediate descent and started using touches to manually open the OUTFLOW valve.

Did not declare an emergency and descent to 12,000 feet with the aircraft completely unpressurized.

We landed, did post flight visual walk-around, and we did not find anything obvious. The next day we again performed a walk-around and again nothing was found. The above stated incident was reported to Reliable Jet Maintenance.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Check Safety valve more often (by Calander).

SMG3 Is made for High utilization aircraft not for Low utilization aircraft.
