NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departure date 08/27/2015. Departure time 1700. Route of flight KHSV (Huntsville, AL) - KSYI (Shelbyville, TN). Weather VMC (Visual Meteorological Conditions). Preflight, Run-up, Departure, Cruise, Landing, and shutdown all uneventful.

Accident date: 08/28/2015 Departure time 1300 Planned Route of flight KSYI - KHSV. WX VMC. Preflight, Run-up, Takeoff, and Departure all uneventful and all checklists were accomplished. While climbing through 3000 feet total electrical failure occurred with no prior indication or annunciation. The Generator Inoperative Emergency Checklist was followed and I was unable to restore any electrical power.

At that time I was near the KFYM (Fayetteville, TN) airport. I continued to troubleshoot the problem but was unsuccessful in restoring electrical power. In the process I turned all switches off and then turned on the battery switch followed by the generator switches and no power was restored.

At this point I was an emergency aircraft; but, without any working radios or a cell phone at my immediate access I could not notify anyone of my situation. I then elected to land at the KFYM airport.

At this time I then went through the Emergency Gear Extension Checklist. After multiple attempts, I did not believe that the gear was extending. I did not feel any resistance in the manual extension handle nor did I have any audible indication that the landing gear was extending out from the gear wells.

At that point due to lack of communication as well as the potential for fire, I elected to leave the KFYM airport area and look for a suitable off-airport landing site. I searched and found a suitable landing site. I then aligned myself for a landing and accomplished the Forced Landing Emergency Checklist. With the landing assured, I then secured and feathered the engines and turned off all switches. While maintaining 95 - 98 knots, I landed the aircraft in the field. The touchdown was smooth and the aircraft came to a quick stop rotating approximately 120 degrees to the right. With no sign of fire or leaking fuel or injuries to myself, I then exited the aircraft without problem.

After a while I was then able to walk out of the field and seek help.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

With no indication of how the electrical system failed, and the inability to restore electrical power, it is impossible to verify landing gear position. The aircraft manual and emergency checklists assume that there is electrical power available to verify the landing gear position. I had no guidance on how the aircraft would perform or how long I needed to pump the manual landing gear handle to get the landing gear fully extended.

At that moment in time, I made the best decision with the available information I had to safely land the aircraft.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Complete electrical failure for unknown reasons.
