Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right landing gear collapsed.

Right wing impacted ground and damaged substantially. No damage to any other parts of aircraft.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I departed Peoria, Illinois (KPIA) early in the morning (6:50 AM Central Daylight Time) to avoid a slow moving-widespread front approaching from western Illinois and Iowa. I checked before takeoff that the weather was VFR and improving along the entire route of flight. After a thorough preflight, I took off VFR on runway 22 from KPIA. I requested flight following for the entire route of flight to KBDR.

As I approached New Jersey, I noted current KBDR weather as 230 @ 10. I was aware that runway 24 was closed, leaving runway 29 as the operational runway. As I approached KBDR I called Tower to indicate I was 15 miles out with information sierra. I thereafter reported left midfield downwind for runway 29 at 1000 ft and 100 knots airspeed with the landing gear extended. Abeam the numbers I pulled 20 degrees of flaps. I was at 80 knots on base. I then turned a 1 mile final and used the final notch of flap.

The crosswind became evident on final, and I used left aileron and right rudder to address it. Continuing on the final approach, I slowed to 70 and then 60 knots as I approached the flare. At the runway threshold, it appeared I was at an appropriate altitude and speed.

After touchdown and a short rollout, the aircraft veered sharply to the left. I recall using rudder and/or brakes to steer the plane. My steering/braking attempts did not work as the plane continued turning left with no immediately noticeable reduction in speed. When the plane went off the left side of the runway, it spun sharply to the left. The right gear then collapsed, causing the right wing to impact the ground. The plane then came to stop. I cut off the mixture and reduced the power control to idle. I noticed no fire and exited the plane.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

- 1) Diversion to alternate airport with lower or no crosswind component.
- 2) Stopping mid way through the trip and waiting for the wind to improve at Bridgeport.
- 3) More cross wind landing practice.
- 4) if the investigation identifies a problem with the brakes and/or rudder, a properly functioning brake and/or rudder system.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Unknown and subject to investigation whether the brakes and/or rudder system were working properly.
