Subject: N406X Accident-Warrenton Airpark

David, attached are some of the pics from the 10-24-2015 Warrenton Airpark Accident. I have it about 10:00 AM local. Pilot/ Owner was Thomas J. Richards. AC N406X, 1976 Maule. Injuries were minor, damage was substantial. I have a few more pics but these give you a rough idea of what happened. Pilot stated he had departed for close traffic for a touch and go before heading over to Warrenton Airport for a fly-in. He stated that he got to slow and landed short, hooking his mains in the cow fence which was lying flat. The aircraft bounced and impacted on it nose and flipped. The nose cone was smashed and the prop bent backwards, the firewall was substantially damaged, wing spar broke on both sides of the fuselage, all 4 wing struts bent, and the vertical stab was crushed. If you need anything else please call.

Thanks
