Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Dents in TKS panels on leading edge of right wing. Dent in leading corner of wing cap on right wing. See attached pictures. No known damage to other property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On November 24, 2015, I flew VFR from KHPN to KDXR. I departed runway 34 at KHPN at 6:06pm and flew direct to KDXR. Weather conditions at KDXR were winds calm, no ceiling, unlimited visibility. Sunset had occurred at 4:29pm.

At KDXR, as directed by the tower controller, I entered the left downwind for runway 26 at approximately 1,500 feet. I confirmed airport altitude (458 ft) / pattern altitude with the controller as there are nearby radio towers. I elected to fly an extended downwind beyond the radio towers, turned left base and then final. I slightly overshot the runway centerline on the turn to final and then adjusted to align with the runway. Upon turning final, the tower controller realized the runway edge lights (MIRL) were at low intensity, advised me, and increased their intensity making the runway more visible. The runway end identifier lights (REIL) were out of service and the displaced threshold is unlighted.

On final, approximately 10 - 15 seconds prior to crossing Route 7, I heard a "thunk" sound and felt a slight jolt as if something had hit the plane. The plane remained straight, unaffected on its glide path and the flight controls were fully operational. I continued the approach and touched down beyond the displaced threshold at 6:18pm. The landing was smooth. I taxied the plane to the Business Aircraft Center FBO.

At the FBO, I inspected the plane along with an employee of the FBO. The right wing had a yellowish goo spattered on top of it, a large dent in the TKS panel on the leading edge of the outer part of the wing, a small dent in the TKS panel on the leading edge more inward on the wing, and a third dent on the corner of the leading edge of the composite cap at the end of the wing. There also was some chipped paint on the top of the wing. There was minimal lighting at the FBO, so we used a flashlight to do the inspection.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1) Improve A/FD disclosure. Current A/FD indicates for Runway 26 a 734' displaced threshold and trees. The accompanying sketch indicates there is a line of trees at the highway. The A/FD provides no detail on surrounding terrain or potential obstructions 0.5 nm out from Runway 26 where the elevation is highest at approximately 650', or ~190' above airport altitude. Location of controlling obstructions and specific altitude of those obstructions should be disclosed. Given the unusual terrain and unlighted obstructions, operations at night and during periods of reduced visibility should be discouraged.

2) Install VASI / PAPI

3) Install Threshold Lights

4) Keep Runway End Identifier Lights in service

4) Develop and keep in service Instrument Approach Procedures for Runway 26
