Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

ENGINES AND PROPELLERS, SUBSTANTIAL DAMAGE TO AIRFRAME DUE TO FIRE ON LEFT ENGINE, NACELLE AND LEFT WING. DAMAGE TO FUSELAGE.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At around 9:45 AM I departed KSPG on a maintenance positioning flight to KPIE to take the aircraft to Clearwater Aviation to have the Flaps checked. The flaps circuit breaker would not reset. The weather was clear with no wind or gusting conditions. I departed with a no flap takeoff on runway 07 at Albert Whitted (KSPG) and had Whitted tower give me a squawk code for PIE. After departure I made a left turnout to 270 Degrees and headed to KPIE. I was approximately seven miles out and went through my landing check list. I put the gear down for landing and called PIE tower. I expected to be cleared to land on 36 right. But the tower controller at PIE told me to turn to 270 degrees and would be number two arrival for the airport for runway 36 right because an Allegiant Air flight was on a seven mile final. At that time I retracted the gear and turned to 270 degrees and climbed. After about four minutes, the controller had me turn back to the right and continue to final and cleared me to land. My attention was now drawn to getting the aircraft configured for a no flap landing. I had previously completed the landing checklist and was concentrating on the second approach and landing, and forgot that I had retracted the landing gear. No warning sounded that the gear was up while on the final approach. On flare out I heard the tower call "GEAR." I immediately engaged full power and pitched to climb, but the propellers hit the runway at that moment. I was able to keep the aircraft going straight down the runway. The aircraft came to a complete stop around 2500 feet down runway 36R. I was trying to secure the aircraft when I noticed the left engine and nacelle was on fire. The cabin filled with smoke quickly, but I was able to exit the aircraft through the aft cabin door. The fire built so quickly. The fire department responded in a few minutes, and extinguished the flames. There is extensive damage to the aircraft due to the fire in addition to engine and prop damage due to gear up landing. But I was safe and uninjured.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

REGARDLESS OF TOTAL HOURS AND TIME IN TYPE, THE CHECKLIST IS STILL CRITICAL. IN THIS CASE, THE FAULTY FLAP ISSUE WAS BOTH A PHYSICAL DISTRACTION AS WELL AS POTENTIAL CAUSE OF THE LANDING GEAR WARNING HORN NOT SOUNDING.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
