Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Telephoned Nemaacolin A/P 10 DAYS PRIOR TO ALERT THEM OF MY ARRIVAL DATE AND TIME. Spoke with 'TAMMY' who said to RADIO them 10 miles out on 123. ON IFR FLIGHT plan FROM Keri. Tower offered me DIRECT to FROM JUST NORTH of KLBE AS opposed to my FILED plan. PASS has NO IFR APPROACH AND I needed to confirm VFR CONDITIONS AT PASS. I have a GARMW 750 AND A PORTABLE G96 WITH ON BOARD weather AND APPROACH plates AND also PRINTED plates FOR KLBE, KVUS AND KMGV. JST APPROACH ADVISED ME OF VFR CONDITIONS AND moderate turbulence DISAPPEARING AT 11 AM. I CALLED 123 SEVERAL TIMES WITH NO RESPONSE AND closed IFR ALERTING services when I HAD the A/P IN sight. I entered the pattern AND turned base AND noticed the trees AND hills were fairly close. I turned final AND noticed the wind sock BLOWING DOWN 05. I touched DOWN AT 85 KTS BUT A BIT TOO LONG AND decided on a go-AROUND. I Applied full power AND went around. This time I extended DOWNWIND AND approached with a long FINAL. The trees ARE close BUT I reduced power FOR A longer FINAL AND touched DOWN IN the FIRST third of the RUNWAY AT 85 KTS. Gusts lifted me back up AND when the A/C settled I was further DOWN the RUNWAY than the first time. Another go-AROUND was now TOO DANGEROUS given the trees AND hills so I Applied brakes. WE almost made it BUT fell off the end of the RUNWAY INTO the ditch.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

In speaking with others after the incident I was told 'it's always BREEZY there' because of the hills AND trees. I WAS ALSO told the RUNWAY HAS A DOWNSLOPE. TREE'S grow... there is no exit, no BAILOUT IF those conditions occur AGAIN. The RUNWAY should be longer or closed. We got out safely... the next guy might not.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

I Found this Article on an AOPA site a couple of days ago.
IT WAS written on Sept 2014.

The slope of the runway should be reviewed. I also called
the Airport at 10²⁰ AM July 12th and spoke to 'TAMMY' who
confirmed that the PAPI's were disconnected! Why?

Since tall trees and buildings line the north side of the paved 3,980 x 50-ft. Runway 5/23, expect low-level interference turbulence if winds are out of the north. The runway slopes uphill to the southwest, so landing on Runway 23 is preferred, wind permitting. PAPIs at both ends of the runway help you judge the correct approach angle, which can be tricky due to the runway slope. The runway is lighted with pilot-controlled lights, but night operations are not recommended unless you're familiar with the surrounding terrain at this mountain airport.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
