

RECORD OF INTERVIEW

Daniel P. Boggs
Air Safety Investigator
National Transportation Safety Board
Office of Aviation Safety - Eastern Region

Date: July 8, 2015 at 10:00 EST
Person(s) Interviewed: Arrin Farrar-student pilot
NTSB Case Number: ERA16FA141

Narrative:

Mr. Farrar was interviewed at the hospital.

Mr. Farrar stated this was only his third flight and he was not the flying pilot. He stated the CFI let him taxi the airplane out from the FBO. The CFI told him that the brakes were recently worked on they were very touchy. Mr. Farrar stated he could not taxi very well as every time he touched the brakes the plane jerked to one side or the other. The CFI took over controls and taxied the rest of the way to the runway and run-up area.

Mr. Farrar does not remember much. He remembers that ATC told them to expedite the takeoff as another aircraft was coming in for a landing. The CFI had control of the plane and taxied out for takeoff, during the rotation, he only remembers the CFI screaming and then he woke up in the hospital room.
