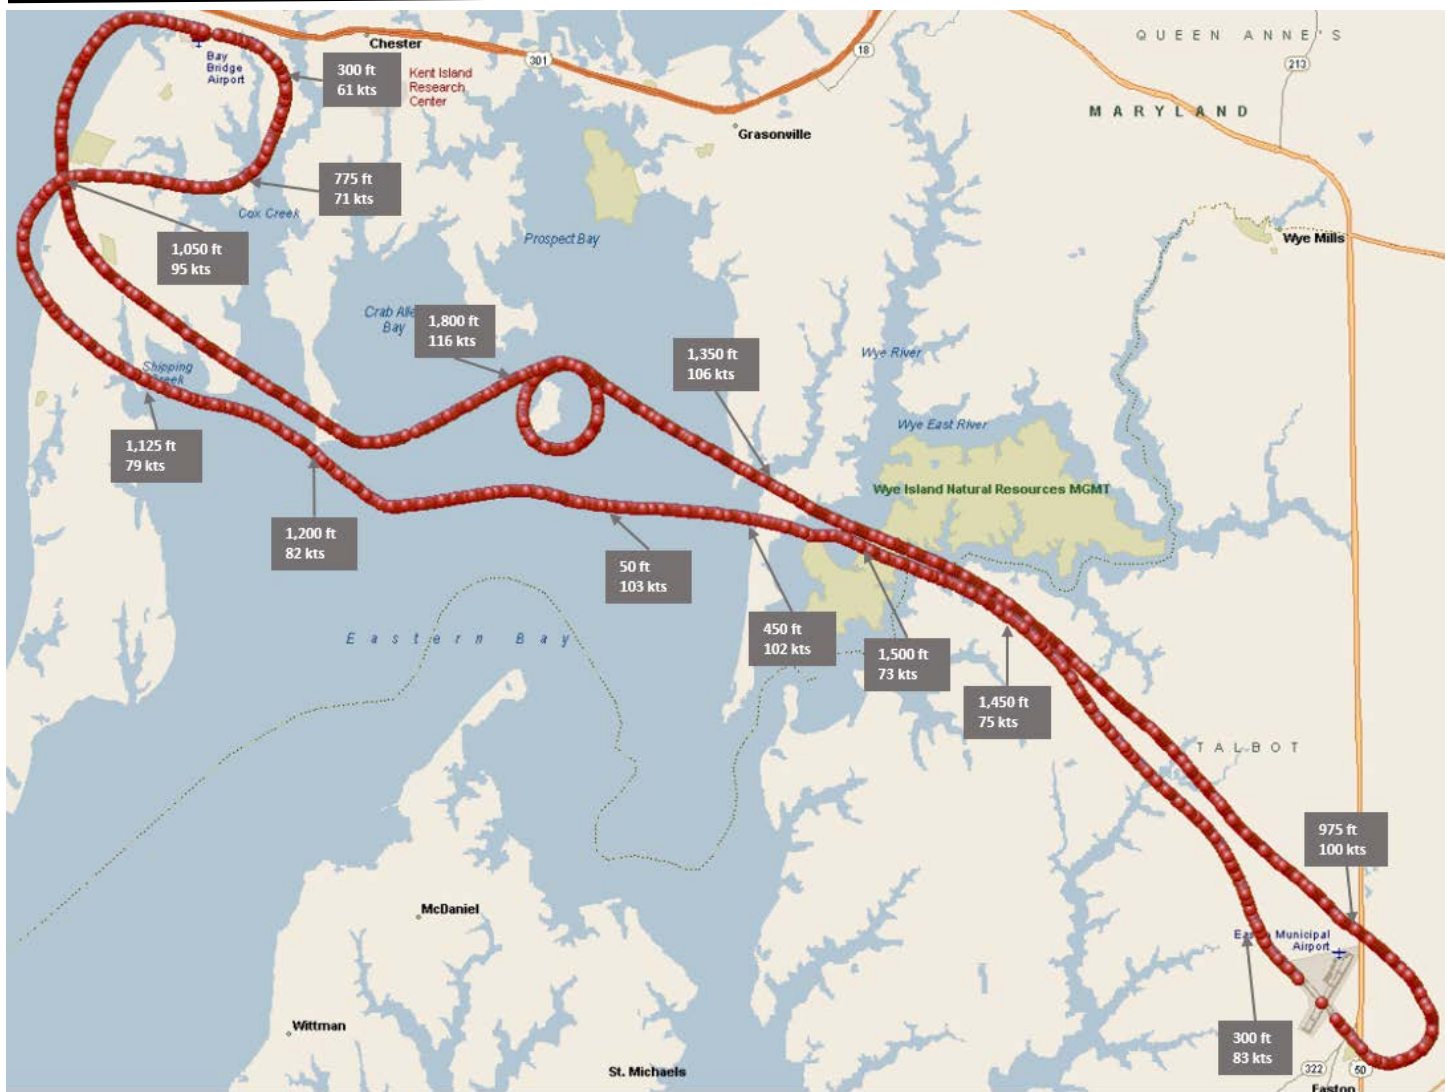

Figure 1-Accident Flight Track Data¹

¹ Track data for the accident airplane was obtained from Harris Corporation OpsVue, a commercially available program that imports FAA radar data from radar sensors across the nation. The OpsVue data is track data and should not be considered radar data. The OpsVue data will illustrate the computer processed track across the ground in latitude and longitude and will derive ground speed and headings from that data. The data applies a national altimeter correction and all altitude data should be considered an approximate.
