

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Orlando State: FL

ZIP: 32827 Country: USA

Latitude: 28.43N Longitude: 81.31W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 02/20/2016 Local Time: 19:00
mm/dd/yyyy

Time Zone: EST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N568XL

Manufacturer: Liberty Aerospace

Model: XL2

Serial Number: 0053

Year of Manufacture: 2007

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 1658 lbs

Weight at Time of Accident/Incident: 1580 lbs

Number of Seats: 2 Flight Crew Seats: 2

Cabin Crew Seats: 2 Passenger Seats: 2

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal
- ☐ Aerobatic
- ☐ Balloon
- ☐ Commuter
- ☐ Transport
- ☐ Utility

Special

- ☐ Restricted
- ☐ Limited
- ☐ Provisional
- ☐ Special Flight
- ☐ Experimental
- ☐ Special Light-Sport
- ☐ Experimental Light-Sport

☐ Certificate of Authorization or Waiver (COA)

☐ None

☐ Unknown

Landing Gear

(Check all that apply)

☐ Retractable

- ☒ Tricycle
- ☐ Amphibian
- ☐ Emergency Float
- ☐ Float
- ☐ Hull
- ☐ Other Launch/Recovery System
- ☐ None
- ☐ Tailwheel
- ☐ High Skid
- ☐ Skid
- ☐ Ski
- ☐ Ski/Wheel
- ☐ Unknown

Engine Type (Select one)

- ☒ Reciprocating
- ☐ Turbo Shaft
- ☐ Turbo Prop
- ☐ Turbo Jet
- ☐ Turbo Fan
- ☐ Electric
- ☐ Liquid Rocket
- ☐ Solid Rocket
- ☐ Hybrid Rocket
- ☐ None
- ☐ Unknown

Fuel System Type (Reciprocating)

☐ Carburetor ☒ Fuel-Injected

Engine	Engine Manufacturer	Engine Model/Series	Manufacturer's Serial Number	Date of Mfg. mm/dd/yyyy	Rated Power ☒ Horsepower or ☐ lbs of Thrust	Total Time (hours)	Time Since: Inspection (hours)	Overhaul (hours)

Eng. 3								
Eng. 4								

Last Inspection Type

- ☐ 100-Hour
- ☐ AAIP
- ☒ Annual
- ☐ Continuous Airworthiness
- ☐ Conditional Inspection
- ☐ Unknown

Date Last Inspection: 01/23/2016
mm/dd/yyyy

Airframe Total Time: 1141 hrs

hours measured at (Select one)

☒ Last Inspection ☐ Time of Accident/Incident

Type of Maintenance Program (Select one)

- ☒ Annual
- ☐ Conditional (Amateur-built only)
- ☐ Manufacturer's Inspection Program
- ☐ Other Approved Inspection Program (AAIP)
- ☐ Continuous Airworthiness
- ☐ Other, specify: _____

Description of Fire Extinguishing System

- ☒ None
- ☐ Specify: _____

Propeller 1

- ☒ Fixed Pitch
- ☐ Controllable Pitch
- ☐ Ground Adjustable

Manufacturer: MT

Model: MT 175 R 127-2Ca

Propeller 2

- ☐ Fixed Pitch
- ☐ Controllable Pitch
- ☐ Ground Adjustable

Manufacturer: _____

Model: _____

ELT Installed: ☒ Yes ☐ No

If Yes:

ELT Manufacturer: ACK

Model or Part No.: E-04 ELT

TSO No.: ☐ OC91 (121.5 MHz) ☐ OC91a (121.5 MHz)
☒ C126 (406 MHz)

Was ELT still mounted in aircraft? ☒ Yes ☐ No

Was ELT still connected to antenna? ☒ Yes ☐ No

Did ELT Activate? ☒ Yes ☐ No

If activated:

Did ELT Aid in Locating Aircraft? ☐ Yes ☒ No

If not activated:

- Indicate Reason:
- ☐ Impact Damage
 - ☐ Fire Damage
 - ☐ Battery Expired/Damaged
 - ☐ Unknown

Additional Equipment (Check all that apply)

- ☒ ADS-B
- ☐ Airframe Parachute
- ☐ Angle of Attack Indicator
- ☐ Autopilot
- ☐ Data Recorder
- ☒ Electronic Flight Bag or Handheld Device
- ☐ Electronic Multifunction Display
- ☐ Electronic Primary Flight Display
- ☒ Handheld GPS
- ☐ Heads Up Display
- ☒ Onboard Weather
- ☐ Satellite Tracking Device
- ☒ Stall Warning System
- ☐ Video Recording Device
- ☐ Other, Specify: _____

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Landing gear collapsed. Wings both damaged. Propeller Strike

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 20 February, 2016, I experienced a runway excursion due to a fault in the braking system of my aircraft which required me to abort a takeoff from runway 18L at KMCO and land the aircraft in the grass area between runway 18L and taxiway Bravo. This occurred at 19:00 EST.

The aircraft, a Liberty XL2, has a caster nose wheel that cannot be steered directly. Steering is achieved by differential braking on the main wheels. The braking system had been serviced in an annual inspection less than 2 weeks prior to the accident. The aircraft had flown 21 hours since the annual inspection with no problems observed with the braking system.

On the date in question, the aircraft was parked at Signature Flight Support on the apron at the runway 36L end on taxiway Alpha. The aircraft was fueled with 5 gallons of fuel to bring the total fuel onboard to 22 gallons. After obtaining the weather, ground was contacted for a clearance to depart. The instructions were to depart from runway 18R and follow VFR procedures to exit the Bravo airspace. This occurred at 18:50 EST. The aircraft was taxied down taxiway Alpha without any problems with the braking system. Holding short of runway 18R, Orlando tower instructed me to cross 18R and depart from 18L. After clearing runway 18R, I noticed that there was some "softness" in the brakes. I stopped the aircraft and instructed my passenger (my wife, Barbara Eggl) to do a brake test. I then did a brake test and the aircraft brakes worked properly.

At 19:00 EST, I was given clearance to depart from runway 18L and was led to believe that I had to expedite the departure. This impression was given to me as ground and tower asked me if I would require a runup prior to departure. Given that traffic was reported on a four mile final, it was my impression that I was expected to expedite the departure. Therefore, I applied power and entered the runway at a 45° angle to build speed for takeoff, rather than lining up on the center line and then applying full power.

Upon entering the runway, the right brake failed. This led to the aircraft veering to the left. Further application of the brakes increased the degree of the severity of the veering and it appeared that I was going to hit the runway lights. To avoid this, I stopped the braking and applied full power to gain directional control with the rudder. Compounding the problem was the slight crosswind from the right (210°). As power was applied, propeller P factor continued the veer to the left. As the runway was 200 ft wide, I was able to gain sufficient speed to allow the aircraft to achieve some ground effect. This gave me some directional control with the rudders and could steer around (and over) the runway lights, signs and the PAPI lights. Having cleared the runway environment, I put the aircraft down in the grass area clear of both the runway and taxiways.

Having fully throttled back, the aircraft touched down on a small ridge-line in the grass. As there was still substantial momentum, the landing gear collapsed and the propeller was destroyed (a wood composite). The wings were also substantially damaged.

There were no injuries to the two occupants, the pilot and the passenger. Orlando ground was called for assistance and the emergency services soon arrived. Given the loss of the landing gears, the aircraft was no longer mobile and arrangements were made to have the aircraft removed and taken to a secure area of the airport for further investigation. This was concluded at 23:00 EST.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The contributing factors to this event included: lower visibility at night and difficulty in seeing the runway center line and my impression that an immediate departure was required. The loss of ground directional control offered me only two solutions: 1) cutting power and applying full braking would have resulted in a further loss of control, an excursion off the runway, damage to the aircraft and damage to the runway environment, and 2) disengaging the brakes and applying full power to allow directional control to be achieved by airflow over the rudder. This could have allowed a normal takeoff to occur. However, as there was insufficient airspeed to achieve a normal takeoff, this would allow me enough directional control to avoid the runway environment and once clear of the lights/signs put the aircraft down in a safe area. In this instance, the aircraft would also be damaged but the runway would not have been effected.

The human performance considerations include: flying at a busy airport where I felt pressured to expedite my departure, my passenger was my wife who had just flown in from Frankfurt Germany and I was picking her up to bring her home to my home airport 20 minutes away. She was tired and I was anxious to get her home as soon as possible. The final factor is that having experienced some "softness" in the brakes after crossing runway 18R, I could have aborted the departure and taxied back to the apron. However, after the brakes test on both sides of the controls, the brakes seemed to be working properly. Given this and that this occurred on a Saturday night, where there was little or no chance I could have the brakes inspected, I concluded that I could safely depart and have an inspection completed at my home airport. Thus, this could be seen as a modified form of external pressure.

Regarding the pilot, I was well rested and had renewed my night currency the previous evening at my home airport in the same aircraft that was involved in the accident. However, the night flying environment was an uncontrolled field where I was more familiar with than at KMQC. Clearly, the aircraft ground handling characteristics were compromised by a mechanical failure, which had not occurred in the two

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Right Brake failed upon takeoff. Nose wheel was free casting and loss of directional control. Cleveland Brakes were installed. The brakes had been serviced and were found in working order 21 hours (or two weeks) prior to the accident at the annual inspection. Unknown part number as my insurance company now possesses the logbooks of the aircraft.
