NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained. I landed with my student on runway 13. We were returning from a training flight. Upon taxiing off the runway we noticed the engine had stopped. I attempted to let the airplane roll as far as possible to vacate the runway. I informed ATC that we were having difficulty and would be delayed before being ready to taxi. I then tried to restart the engine. When the engine would not restart I primed once and attempted again. At this time my student noticed smoke coming from around the cowling. I quickly turned everything off and we evacuated the aircraft. There was no fire extinguisher in the airplane. I called 911 and informed them of my emergency. The dispatcher called me back and asked me to open the airport gate so the emergency personnel could get to the fire. The first person to respond was a police officer with a small fire extinguisher which he quickly used. When the fire department arrived they put the small remaining fire out. By this time the engine had been burning for 10-15 minutes.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

After the incident when I was explaining to the flight school owner (who is also his own mechanic) he mentioned to me that carburetor had problems. I don't know to what extent, but I also found out later from another instructor that there was a carburetor fire previously in this airplane. This could have been prevented with good maintenance. Carburetors, spark plugs, and magnetos that are in good condition and serviced properly would be my recommendation
