Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to the underside of the left wingtip as impacted the runway.
Dents and upward bending in the middle portion of the left wing from leading-edge to trailing edge above and undersurface.
Windspar most likely bent.
Bending and dent of left aileron at the same level.
Scratched and loss of screws of the left main gear fairing.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Description of accident:

On a cross country flight from KTPF to KEYW, I planned a fuel stop at KPGD. At around 5:00 PM. KPGD Tower was contacted ten miles north. ATIS Information Echo current (270/5, Sky clear, landing and departure RWY 22). I was asked to report on south shore of river. As I monitored frequency, no traffic was heard except for "Allegiance Maintenance" exchanging communications with tower, on the ground, doing some taxiing and maintenance. I contacted tower on south shore of river as directed, and received clearance to land R traffic RWY 22. R base, final, flare and touch down uneventful, I pull flaps up, and rolling down the runway, I notice the Allegiance jet (Probably an MD-80) on the first exit to the right on Taxiway A2, facing away from RWY 22. As I planned to continue rolling down RWY 22 to exit on the next exit on the right on taxiway Charlie, suddenly, I lost rolling control, became airborne again, and blown off on to the grass on the left side of the runway. I tried to keep the plane level, and applied back pressure on the controls. Coming to stop, more than 30 feet off the runway. Engine cut off, and as I exit the plane, I heard a roaring noise of the engine of the Allegiance jet on taxiway A2. A review of the plane's underside mounted GoPro camera video, as well as the track log of ForeFlight, can confirm the plane being blown off the runway due to the Allegiance jet's thrust

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Avoid aircraft to do maintenance closer to the runway specially running up the engines towards an active runway.

Alert pilots of wake and turbulence in all cases even though the plane is no landing or taking off, whenever there is an airplane with engines running in the runway or taxiway that could affect the path of other airplanes.
