FOR NTSB USE ONLY

NTSB Accident/Incident No. ERA16LA263	Reviewed by NTSB Regional Office ERA	Name of Investigator R. HICKS	Date Report Received 8/29/2016
---	--	---	--

Warrenton Airport is used for training flights by helicopters from Manassas Regional.

Warrenton does not have a heliport. To avoid undue traffic snarls the Copters fly a right hand landing pattern and do not land. Instead they hover a few hundred feet above the center of the runway then declare departure and climb out to the right.

Sitting on the ramp ready for departure I listened to the copters radio calling downwind, base and final and departure. I pulled out and while turning right to line up with the runway I noticed the Copter still hovering ahead.

In the Tripacer I would have reduced power and pulled the brake. My new Airplane has all the levers etc. on a different place. The throttle is much lower and there is no handbrake. Remembering that I have to use my toes I pushed hard, and very likely too much on the left side causing my plane to leave the Runway. I have no idea why the Nose Gear collapsed broke the Propeller and damaged the left Wing. All this happened in a few seconds.

Describing the Copter operation is not an attempt to issue blame.

I CAUSED THE ACCIDENT

WOLF
