

July 27, 2016

Attn: Stan Peters

On July 23, 2016 I Oscar Toledo went on a local flight with Frank Guzman on his airplane a Cessna 310 tail number N3261X departing Linden airport (KLDJ) around 12 noon. It was a clear sunny day with light winds. Returning back to Linden airport Frank flew a left traffic pattern to runway 27. I watched Frank follow his landing checklist . On short final he rechecked his landind gear indication and called out 3 green.

Frank did a normal landing. As we were rolling down the runway I heard a loud bang behind us followed by the airplane starting to swirl and the tail dropping to the ground. With the airplane going out of control i reached for the prop and mixture controls and I moved the levers back in an attempt to feather the engines and cut off the fuel. The plane skidded off the runway onto the grass and a full stop. We exited the airplane with no injuries and awaited assistance from the airport services.

Oscar Toledo
