

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: London State: KY
 ZIP: 40744 Country: USA
 Latitude: N37 5.2133' Longitude: W84 4.6433'
(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 07/24/2016 Local Time: 10:37 a.m.
mm/dd/yyyy Time Zone: Eastern daylight

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N602SL

Manufacturer: Alisport Srl.

Model: Silent 2 Targa

Serial Number: 2024

Year of Manufacture: 2006

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 660 lbs

Weight at Time of Accident/Incident: 595 lbs

Number of Seats: 1 Flight Crew Seats: 1

Cabin Crew Seats: 0 Passenger Seats: 0

Number of Engines: 1

Category of Aircraft

- ☐ Airplane
☐ Balloon
☐ Blimp/Dirigible
☒ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Aircraft: Left wing broken off. Canopy shattered. Property: 2 sections of chain-link fence damaged. Roof of mobile home damaged. Parkplace Homes, Amie Thacker, Owner, phone [REDACTED]		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.		
My wife and I had driven the forty minutes down from our home in Berea, KY to the London airport, arriving about 9:30 Sunday morning (July 24). I rent a hangar for the glider at the London airport, and fly it out of there. My plan was to fly a couple of pattern flights then stay up in a thermalling flight for an hour or so. Wind was light with clear conditions. I went up for the first flight, a simple take-off, stow-the-engine, glide-around-a-bit, and land flight. All went perfectly, so I extracted and started the engine, taxied back to the ramp, got out and looked things over, then got back in and prepared to go up a second time. When I latched the canopy I had to settle the right side twice, but the second time it seemed absolutely normal. I taxied out for the second flight, took off on runway 24, climbed under power straight out to 500' AGL, executed cross wind and downwind turns, and was climbing at 700' AGL when the right side canopy latch released. The canopy rose only an inch or so and I thought I could surely save the canopy (and of course the glider, and myself). But as soon as air began entering the cockpit the left side latch released too, then the front pivoting latch, and I needed both hands to hold the canopy down. I turned the engine off, and, wrestling the canopy all the while, managed to execute base and final turns and line up on the runway. Normally the glider would have made the runway from my height with ease, but the extra drag from the opened canopy and erected engine was too much, and I was forced to fly the glider into a tangle of trees just before the airport fence. Impact with the left wing stopped the glider instantly, the nose went down, and the glider came to rest in a dense thicket of brush. I assessed myself for damage, finding only a deep gash on the bottom of my left forearm, oozing but not spurting blood. I had no cell phone and I doubted the airport Unicom was being monitored. I doubted anyone had seen me go down. So I extricated myself from the cockpit and made my way through the brush along the fence line, in the direction of the rear entrance to the airport. After a half-mile walk I was able to let myself in the back entrance of the airport and walked across the runway and taxiway to my wife, who was waiting for me on the ramp, not having seen the glider go down. She took me to the Emergency Room of the London Hospital, where my arm was stitched up. The hospital released me about 8 p.m. and we returned to Berea.		

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Triple check the canopy latches. Push up hard on the canopy overhead for an additional check.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The canopy came unlatched, first at the back right side, then, as the canopy buffeted, at the left side, then the pivoting latch at the nose. It's my understanding that the pivoting latch is designed not to be released accidentally, but there were certainly unusual torque forces acting on it. I don't know if the initial right side unlatching was due to a malfunction of the latching mechanism, or to my failure to secure the latch initially, though I did check it twice. But after my initial latching and checking, the engine was started, the glider was taxied one-wing-down on the asphalt 300 feet out the ramp and taxiway to the runway, a take-off was performed, and two turns. I have no idea why the unlatching occurred only after all that, in straight-ahead smooth flight.

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☐ Yes ☒ No**Method of Exit** – Describe how the occupants exited and how many occupants evacuated each location

See discussion of evacuation in Narrative above. The aircraft was nose-down about 45-degrees in dense brush. The canopy was lying nearby. After my physical assessment and my decision to leave the aircraft, I released the seat belts and clambered out over the side of the cockpit, leaving behind dark glasses and a headset. I kept the parachute on, hoping it would help me penetrate the thick tangles of brush along the fence line.
