Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Airplane collided with several trees in the wing area.
Airplane also collided with a low rock wall which collapsed
the nose gear

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Student should have entered the traffic pattern instead of doing a straight in for runway 21. Students are told to enter a 45° for the downwind of the pattern. Student should have followed his checklist

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

On August 19, 2016 I had my Long cross country flight from Stow to Laconia to Sanford then back to Stow again. I was on my way back to Stow on a cruise descent from 4500 ft onto a 4-mile final for runway 21; when I was at around 2500 ft MSL, pattern altitude is 1300 ft MSL, I suddenly lost a great deal of engine power, 2500RPM to 1300RPM. I immediately pitched for an airspeed of 70 mph which is the best glide speed for the 1976 Cessna 150 I was flying. At first I thought I could make it to Stow, but realized shortly thereafter that it would be impossible. I began to search for a place to land. A grass field caught my eye that was fairly close to me. I turned towards the field. I had some time now to see if I could get the engine to run better. I mentally went through procedures for an engine out. I put the mixture at full rich and put in carburetor heat. I initially thought it was some sort of fuel starvation; so, I opened the throttle all the way up in order to increase fuel flow to the engine. I was now on a sort-of left base for the longest length of the field. I kept the base leg close to the end of the field for fear of slowing down too much and stalling the aircraft or hitting the trees. As I was about to turn onto a final approach about 800 feet off the ground, the engine finally completely failed. I was now on a very short final with a lot of altitude to burn off. I tried to put in flaps to no avail either by mechanical or pilot malfunction. I thought about going into a slip, I had never done a slip without full 40 degrees of flaps; so, I did not enter a slip for fear of the unknown. I forced the aircraft to descend via pitching the aircraft down. I still feared stalling the aircraft or landing in the trees if I lingered in the air to burn off some of that airspeed and altitude. I hit the ground very hard and bounced a few times before coming to a mound which I launched off the side of. I bounced one more time at the base of the mound before my nose wheel hit a rock wall and my wings hit a few trees. This halted my momentum and I was finally grounded and safe.
