Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On August 20, 2016, on or about 0920 local, I was flying subject aircraft heading SW toward Tavares, FL. I was cruising around 1,200 ft AGL, when I noticed a flashing red light on my TASKEM digital instrument panel, indicating one of the set parameters was not satisfactory. I immediately turned around heading to my departure airport, when the engine started winding down, like it was running out of gas or power. I had a full tank of gas (12gals). The engine quit running and I selected a decent size field to glide in and land. It turned out to be a small pine tree farm. I called a few friends, including the builder, which showed up and helped me determine what was wrong. We determined that the battery was completely dead. I bought a brand new battery, installed it and ran the engine. I asked the owner of the field how long was my takeoff field; he informed me 750 feet, plenty of runway for the experimental to takeoff safely. After discussing my options with my hangar mate, we ran the engine and everything seemed satisfactory at the time. I decided to takeoff heading north, as the farm owner had recommended, since his farm had many boroughs heading east to west. Having set myself for takeoff, I applied power with the brakes on, released the brakes and proceeded with my takeoff roll. The takeoff surface had an incline, heading slightly uphill, then downhill, blocking the view to the other side. Arriving the middle of the "runway", I noticed the speed was not picking up as I expected then the engine began to spool down again. At this point, I decided to abort the takeoff and firmly applied the brakes. The grass surface was tall, possibly hindering the acceleration. The brakes locked and the aircraft skidded towards a "chicken wire" fence. The aircraft knocked the fence down and it ended up resting on its left side. The front fork took the brunt of the impact and it collapsed and ended underneath the trike. The wing, made of aircraft grade aluminum, nylon cover and steel cable braced (similar to a hang glider wing), suffered some damage from resting on its left side. I estimate the speed at time of impact was around 30 mph. The weather conditions were Daylight CAVU with practically no wind.

Except for a slight sprain on my left ankle and a few bruises, I was otherwise unharmed in this event. The local law enforcement showed up along with the EMT's. I declined medical assistance since I didn't need. The trike can be fixed, however I decided to quit flying these things and acquire a more reliable aircraft. Property damage included the aforementioned fence and an aluminum awning, which has been taken care off. In retrospect, I am convinced that the component that failed was the alternator that was not charging, hence the loss of power when the voltage ran low.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Having replayed in my mind the events of that day over and over, I have thought of procedures I could have done differently. One option that comes up is I could have broken the trike down and trailered it to home field. Possibly, I could have aborted the takeoff more quickly, but I didn't consider the grass as a detriment to the aircraft performance. Hind sight is 20/20.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I believe the alternator was not charging the battery.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

The true category of aircraft is a Weight-shift Trike, a selection that is not available on the category section. I do not think it is powered lift since that denotes a powered parachute. The date of engine manufactured is unknown, but it is a brand new, completely overhauled engine with a total of 25 hours since overhaul/installation.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
