Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Helicopter destroyed, some trees damaged in fire		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.		
On September 27, 2016 on my property in Andover, NH when I decided to fly my Safari Helicopter the weather was clear, around 62 degrees with no wind. I put the wheels on the helicopter and pushed it out of the barn to the end of my cement pad. I placed the skids on two rubber mats and removed the wheels. I added 10 gallons of AV gas and both tanks were full. I did a pre-flight and checked all fluid levels. Start-up Area – Clear Start – Normal Gauges – Checked Lights – Tested Flight Controls –Checked Run-up X2 I flew off the pad and landed in the pasture (20-25' away). I did a vertical take-off & hovered around the pasture. For about 10 minutes I made some turns and did some rearward flight. I positioned the helicopter in the field giving me a suitable take-off run to the NW toward the trees. I went into a hover a bit higher because of the rising terrain ahead. While hovering, I went to T-off power of 27" manifold pressure, rotor RPM in the green and moved forward, coordinating collective, cyclic and anti-torque pedals for heading. Into the T-off, airspeed increasing, altitude increasing, past mid-point the helicopter started a more vertical ascent than I could counteract with cyclic. The trees were approaching, but I was certain I would clear them. It is at this point that my memory is not totally clear. To the best of my recollection, this is what occurred: The increased vertical ascent was slowing my airspeed. I was approximately 15 to 20 feet higher than the tree line as my helicopter approached the trees, but my airspeed had slowed considerably. I adjusted the collective and the helicopter was holding altitude above the trees. I then applied more forward cyclic to increase my airspeed. As I advanced over the trees the helicopter was not responding to my forward cyclic input and was moving very slowly. It was when I approached the far side of the trees that the helicopter came to a complete stop. I heard no rotor horn sounding. The noise level of the main rotor blades seemed to have increased. The helicopter swung to the right as the nose dropped. Then the tail boom went down and swung left taking the helicopter into the trees.		

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Collective cables and springs are behind pilots seat, you have to remove back panel to inspect properly

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
