Cessna 207
ME55 Vinalhaven

On Monday, June 26, 2017, I was assigned the mail flight from RKD to ME55. After installing the cargo net, the mail was loaded in both the forward and aft cargo compartments according to weight and cg guidelines. The weather was clear and winds were light. Takeoff at 0700, enroute, and approach to touchdown were normal with no mechanical irregularities noted. The windsock indicated Runway 24 as appropriate for landing. Touchdown was firm and resulted in a bounce. I felt the bounce was too high and the runway too short to catch with power and land farther down field, so elected to go-around. The prop control had been set for high rpm in the pattern. With full power applied, the flaps switch was set by feel to a desired balked landing position of 20 degrees. With concern for the trees the attempt was made to climb over them while avoiding a stall. Eventually it was evident that impact could not be avoided. Nearly simultaneously with striking the trees, the nose began to drop, perceived by me as the developed stall and I instinctively reduced power as no opportunity to save the situation remained. My forehead struck the glare shield and the plane settled to the ground. At this point, I turned off the magnetos and alt/batt switches, and pocketed the keys. The pilot side door functioned normally, so I stepped out and walked away. I did notice a stream of fuel washing down the port side fuselage while leaving.
