

## MEMORANDUM FOR RECORD

**Heidi Kemner**  
**Air Safety Investigator**  
**Eastern Region Aviation**

**July 28, 2017**

---

**Subject:** ERA17CA251  
**Who:** Kirk Jaeger – FAA Inspector

In a telephone conversation with Inspector Jaeger, he stated the following:

- After removing the airplane from the cranberry bog, they found the feathers and remains from a Canadian goose.
- The propeller blade was loose in the propeller hub.
- It looks like the propeller struck the goose on takeoff, which resulted in the partial loss of engine power.
- The airplane sustained damage to the wings, fuselage, and propeller.
