Subject: ForeFlight Re: NTSB Request regarding Hopkinsville, KY accident from 5/12/2017

Hi Paul,

My bad, not sure how that typo crept-in. The account I found is indeed under Giammetta.

The Server team checked and there were no briefings requested by that account on or around 5/12.

However the pilot did view some weather Imagery on the 11th and 12th. We don't archive the actual images they viewed, but here is what they pulled-up:

All were Extended Convective Forecast Products sourced from <http://www.aviationweather.gov/ecfp>. I have attached a screenshot showing how these are laid-out in the app. The images shown on that page are the current ones as of right now and are NOT what the pilot saw at the time they were viewing them on 5/11 and 5/12.

5/11/2017 16:56 UTC: 24 - 30 HR (in the future)

5/12/2017 00:59 UTC: 12 - 18 HR (in the future)

5/12/2017 12:09 UTC: 3 separate ones:

6 - 12 HR (in the future)

0 - 6 HR (in the future)

18 - 24 HR (in the future)

Let us know if we can be of any further assistance on this one.

Regards,

-Josh
