Federal Aviation Administration

Date: 9/29/17 Location: Umatilla, FL Time: 1154 hrs.

Witness Name: Bryan Ricardo LUCIANO

FL DL: [REDACTED]

Narrative:

At around 1130, coming or heading on a north-north west heading when the accident occurred. The aircraft was on an altitude of approximately 50-60 feet. They heard the engine running and heard two "bangs" or "pops" coming from the aircraft. They saw the big propeller coming off the airplane which looks like it snapped. The pilot seemed to lose control because it was going down on a rotation. The blade actually came off as soon as the engine stopped working and he lost control. That is when the big blade snapped. We did not see any debris coming off in the air. We lost visibility of the aircraft behind the tree line and heard a big sound when it crashed. We took some ATVs from the farm and went to look at it. We found the wreckage and the body inside. We called the property owner to let him know and the police came within 10 minutes of the incident.
