Subject: RE: contact info

Dan,

On 11/1/2016, at approximately 1500, arrived on the accident scene where a helicopter that was piloted by Mr. Andy Stephen was found to be destroyed. There were no injuries or post crash-fire. The aircraft was being operated as a CFR Part 137, (Agriculture) spraying a field with herbicide. The aircraft had just refueled from a tanker-truck platform when a mechanical malfunction had occurred. The tail-boom of the aircraft broke off and made contact with the main rotor. The aircraft torqued to the left and made impact with the ground. Witnesses that were interviewed at the scene described the same events in this accident as tail rotor was the first part to fail on this aircraft.

Regards,
Michael K. Foster
