Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both wings damaged by hitting fence posts during forced landing.
Included with the wing damage was a torn left wheel hydraulic brake line.
The nose landing gear collapsed which caused a propeller strike.
Also present was firewall damage with the fuselage skin aft of the firewall wrinkled.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approximately 1430 on October 31st, 2016 I departed KSFB on a 30 minute personal VFR flight enroute to KBOW.

During the flight prior I had noticed a slightly elevated cylinder head temperature on cylinders #1 and #2, along with a slightly elevated oil temperature. All still remaining within normal operating limits.

Concerned, I consulted with my A&P of 20 years and was bringing the airplane to him at KBOW for evaluation.

The runup before leaving KSFB was 100% normal.

The weather was good VFR all day.

After contacting the KBOW Air Traffic Control Tower, I was given instructions to join the left downwind for runway 05.

While maneuvering to join the downwind leg I reduced the power to descend. After reducing throttle I heard a noise from the engine and it began to vibrate and shake.

I turned on electric fuel pump and switched fuel tanks with no improvement.

It quickly became obvious I was not going to make the airport with the now crippled powerplant and chose an open cow pasture for the forced landing.

I had the field made and the noticed a fence running across the middle of that cow pasture.

Hit two fence posts and the rest is as described above.
