

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: South Carthage State: TN

ZIP: 37030 Country: United States

Latitude: 36.25N Longitude: 85.97W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 01/11/2017 Local Time: 3:40 PM
mm/dd/yyyy

Time Zone: Central

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N3156K

Manufacturer: Maule Air, Inc.

Model: MX7-160

Serial Number: 19036C

Year of Manufacture: 1995

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 2200 lbs

Weight at Time of Accident/Incident: 1750 lbs

Number of Seats: 4 Flight Crew Seats: 1

Cabin Crew Seats: 2 Passenger Seats: 2

Number of Engines: 1

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Engine mount broken and bent with engine displaced into the firewall causing instrument panel to shift and fuselage to buckle, left gear broken, left wing impacted ground causing bent spar and multiple bends and punctures, right wing visible spar damage, fabric covering on fuselage torn, tube fuselage structure visibly contorted from impact, window screen broken, wing struts bent, cowlings destroyed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 11 Jan 2017 I departed M54 (Lebanon) after a meeting with a flight school. According to the Lebanon AWOS, the winds were out of the south (190) at 13 knots with no gust at 2:56 pm central. After preflighting the aircraft, I started the engine at 3:08 pm central. After a normal start, I taxied out for departure on runway 19. The pattern was empty and systems/engine check showed the aircraft was operating in the normal range and properly. GPS destination was selected for "HOME" (User waypoint: Approximately 36.25N x 85.97W or 17 nm on a 261 heading from M54). Before takeoff I verified the winds again and they were unchanged from my initial check. Radio calls including taxi, runup, takeoff, pattern exiting and final call were made during departure. Normal takeoff procedures were used and the pattern was departed on downwind (RWY 19) at 3:20 local time. Standard procedures for landing at our private grass strip at to overfly the field to verify there are no obstacles and the local windsock confirms the weather from Lebanon. The flight was less than 20 nm total distance. The grass strip is 1195 feet by 75 feet sloping between 3 and 5 degrees up from the southern portion to the northern. Landing is always to the north (Approx. 350 heading) and departure to the south (Approx. 170 heading). The wind was still out of the south and slightly west according to the windsock. The weather was checked at Lebanon reporting the winds out of the south at 12 knots still. The pattern for the strip is through a valley between a larger hill to the south and a smaller one to the west/north. The commital point is approximately 1,000 feet from the runway over the creek that flows across the farm. Once I reached this point, airspeed was 70, altitude was on target, and I elected to land. Beyond this, I have no memory of the attempted landing, accident, or anything with the exception of calling my father until transported to Vanderbilt University via LifeFlight Helicopter. There were two witnesses who saw the aircraft crash from separate locations. Both witnesses stated the wind began swirling and gusting just prior to the aircraft touching down causing the aircraft to steer to the left and then crash. The aircraft came to rest on its nose with broken left gear and left wing and nose with the engine mount displaced backwards towards the cabin area. I exited the aircraft via the passenger door (Pilot door blocked by the collapsed wing/ground) and called for help. Aircraft was recovered by AMF Aviation out of Springfield, Tennessee without my knowledge. Weather from Nashville (30 miles west of the airstrip) was checked after the accident to find that the winds had increased to 16 gusting 23 knots around the time of the accident.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident was caused by gusts of wind that were not anticipated by the pilot. The winds at Lebanon were checked prior to departure and on arrival the windsock corresponded to the winds in Lebanon. The pilot has landed at this particular runway in this aircraft approximately 350 times over the last 4 years with never even a close call. The runway is a "one-way-in/one-way-out" airport due to about 4 degree slope (average). Landing is always to the north which inevitably results in tailwinds at times. To deal with this dangerous scenario, I have begun working on personal minima that would allow me to progressively get more comfortable with these landings. Originally, I would not land when there was any tailwind (landing rather at Lebanon) and then had a "light" minima, "5 Knots" minima, and 10 knots, and finally (the last one I thought I would have) 15 knots (which I have landed under numerous times) without any issue. The slope allows the aircraft to naturally stop in less than half runway length under this condition. When the wind began to gust as it did the day of the accident, I inadvertently strayed outside my personal minima causing the accident. This accident could have been prevented if I would have maintained my "no tailwind" personal minima and simply kept an error margin for the runway. In years to come, should I still land at this airport, it will be my permanent minima and the weather at Lebanon will be required before attempting to land to verify the wind speed. Should I be unable to land, I will make the short trip back to Lebanon where a safe landing can be made.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
