Subj: Aircraft incident statement

YAK-52 N624PT

Owned by Robert Baker and Roman Upshaw, no liens.

Date and Time of the incident:

February 1, 2017 at approximately 5:15 pm

Location:

St. Elmo Airport, 2R5, aircraft is currently located in a hangar there.

I departed from runway 24 at 2R5 at around 5:15pm, made a left turn and climbed to 1500ft. I noticed my air pressure was at 2.5 Bar after I retracted the landing gear, which is a bit lower than it should be. A minute or so later I saw that the air pressure had dropped to 1.5 Bar. I immediately slowed to gear speed and lowered the gear handle. The landing gear remained up and locked. I then went through the emergency gear extension procedures and this was followed by a loud bang as the gear came down. I thought all was well until I checked the gear lights and poles and discovered the right main gear was still retracted. I climbed to 1500 ft and performed some positive and negative G maneuvers to see if I could get the gear to unlock, with no success. I opened my canopy and performed a normal, but slightly flatter approach with the flaps up. When landing was assured, I turned off the mags and touched down. I was able to keep the right wing off the ground for about a thousand feet. After the right wing came down I had some directional control with brakes and rudder but the aircraft drifted over to the right side of the runway. The aircraft left the runway next to the center taxiway and headed north in the grass for a couple of hundred feet to where it stopped. I was assisted by some friends in manually unlocking the gear and lifting the wing up so the gear would extend and the aircraft could be towed. We then towed it to the ramp.

524705-30 Uplock Cylinder Assembly

Gentlemen,

As we previously discussed the pneumatic cylinder that releases the up-lock failed and is the cause of the gear up on the right main. We found that the cylinder would start to actuate but would not travel enough to release the up-lock hook. The extension test was performed on the normal and emergency systems at various pressures with no change in travel. The aircraft has a design flaw in that the up-lock release is the same for the normal and emergency system. Rob Baker followed the flight manual but with the failure he incurred there was nothing that he could do to release the right main gear. We will be replacing the Up-Lock Cylinder PN: 524705-30. I plan on disassembling the cylinder in order to identify the failure.
