

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowlings, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMS (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.ntsbgov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Water landing in approximately 12' depth of salt water. Left wing mostly torn off. Right windshield and right front pax windows broken. Damage to fiberglass nose cowling (near landing light). Damage to right fiberglass wingtip was caused by towing company lifting the airplane.

No damage to anything else.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departure was from the Tampa-Peter O' Knight (KTPF) airport and intended destination airport was Sebastian, FL (X26). Departure time was approximately 1330 local time on Sunday March 12, 2017 and estimated in route time was 1.2 hours flight time. No services were obtained from KTPF except transient tie-down.

Airport crew towed the airplane from the tie down area to the front ramp approximately 30-60 minutes prior to my arrival at the airport. The maximum gross weight for the Piper PA28-140 is 2150 pounds, which based on my weight and balance calculation gave me a margin of 302 pounds. The distribution of weight kept the aircraft in the Normal Category. I checked the weather on the Fore Flight app, AWOS and the airport terminal monitor. I performed my preflight checks of the airplane and everything was normal. Engine oil looked clean and between 6-7 quarts. Fuel in each tank was approximately 17 gallons (per side). Draining the fuel sumps revealed no signs of water or moisture in the fuel samples. Check list was reviewed after completing preflight and followed for aircraft and engine startup. Engine started right up with no hesitation or delay. After listening to KTPF AWOS on 118.925 (118.92), I made a radio call on UNICOM 122.725 (122.72) to announce my intention to taxi to runway 22 for departure.

Winds were favoring a runway 22 departure. I taxied to the run-up area and performed the mag check and carb heat check in accordance with the check list at 2000 RPM. All checks were satisfactory giving about a 75-100 RPM decrease with each test. Engine vitals were all satisfactory. I completed the checklist and ensured the mixture full rich, carb heat off, electric fuel pump on, and fuel selected to fullest tank (left). Trim was approximately neutral and put in one notch of flaps. The aircraft was prepared for departure. I made a radio call on UNICOM to announce my intentions to take the active runway 22 for departure. With my toes on the brakes, I slowly pushed in the throttle to full power and the RPM increased to full power as expected. Releasing the brakes, the aircraft began its normal roll out and normally accelerated to rotation speed of about 60 MPH. The aircraft began a normal climb and reached a top speed of about 70 MPH in climb when it reached its maximum altitude of 100'. At this time the speed dropped back down to 60-65 MPH holding the same attitude. I lowered the nose to a level attitude to see if the speed would increase but it did not. Looking out the front window at level attitude and at an altitude of about 100', I made the determination that there was not enough usable runway left to perform a landing. Additionally, I did not feel there was enough area beyond the end of the run way to make a safe landing. There is a chain link fence, public road, a row of bollards and a pedestrian/bike path past the end of the run way. Beyond these obstacles there is a short stretch of grass before it drops off into the water. We drove on this exact road prior to arriving at the airport not long before and there were multiple joggers, cyclists and other pedestrians. The entire island was very busy with all types of non-aviation activities: cycling, walking, Frisbee games, people with their dogs, boating, etc. I knew trying to make an attempt to return to land on runway 4 would place me in a very dangerous condition to potentially enter a stall-spin situation. Making any type of right turn would place me closer to residential areas. A straight ahead (runway heading) path would only lead me further from the airport out into Tampa Bay and closer to Mac Dill Air Force Base Class-D airspace. Mac Dill is approximately 5.5 miles from Peter O' Knight. My best option was to attempt to land on runway 36. In order to make this attempt, I had to stay outside of the Seaplane/Boat Basin which was full of moored sailboats and other vessels. The Davis Island Yacht Club's docks also extend into the basin. The Yacht Club is located on a peninsula that creates the basin that extends out from the island. Besides my own life, I was mostly concerned with the safety and lives of the people and animals as well as structures and vessels that may have been below me. Throughout this entire evolution I made at least 2 possible engine failure radio calls on UNICOM to Peter O' Knight. I did not anticipate an immediate response and none was received. Additionally, I made several checks of full mixture (in), full throttle (in), carb heat off (in), electric fuel pump on (up), master on (up) and fuel on the fullest tank (left). I did switch fuel tanks from left to right, there was no change in engine performance. I switched back to the left. I also pulled the carb heat on with no change in engine performance. After some time, I pushed it back in. My speed continued to decrease as well as altitude. Speeds were ranging between 50-60 mph while descending. At this time I ensured the door was unlatched at the top. This aircraft had an older style door handle/ latch release (mid latch). It was pressed down which unlatches it. Airspeed dropped to approximately 45 MPH and I knew the water landing was imminent. I engaged full flaps and held the controls to my chest. I maintained the wings as level as possible throughout the entire flight. (Continued on Page 11)

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Engine not producing rated power output. Apparent cause unknown.
Lycoming O-320 Series
Serial Number 28-22334
Date of Manufacture 1966
140 Horse Power

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No**Method of Exit** – Describe how the occupants exited and how many occupants evacuated each location

I was the only person on board. Prior to the water landing, I unlatched the right door. After the main landing gear hit the water, water almost immediately came over the windshield. I recall unbuckling my seat belt with my left hand and pressing against the door with my right hand. I swam out through the door under the right wing. I surfaced at the trailing edge of the right wing. My headset was on my left arm and my knee board was in my right hand.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

(continued from Page 9)

When the main gear hit the water, the aircraft decelerated rapidly and almost instantly water came over the windshield. I remember the cockpit being full of water, unbuckling the seat belt with my left hand and pressing against the door with my right hand. I swam out and was somewhat beneath the right wing. I emerged at the trailing edge of the right wing. My headphones and knee-board were with me. The empennage was sticking up in the air a little beyond vertical. I was standing on the right main landing gear. People from the dock at the boat launch were yelling out to make sure everyone was OK. I said I am the only one on board and I am OK. Within moments, a center console type boat approached from the rear (south) to rescue me. The husband was at the helm and the wife was making the 911 call. I swam approximately 10 yards to the boat, threw my headphones and knee-board in the boat and climbed in on the starboard side. The boat motored to the seawall inside the basin adjacent to the Peter O' Knight Terminal. There I climbed off the bow of the boat and onto land. My intention was to walk to the terminal to inform them I was OK. When I crossed the road, the ambulance was just arriving. I flagged them down and informed them I was the pilot involved in the water landing. EMS checked my vitals and overall well-being. Besides the couple scratches and initial slightly elevated blood pressure, I checked out OK. They checked my blood pressure again in about 10 minutes and it returned to normal levels. By this time, the Tampa Bay Police, the Tampa Bay Fire Department and the Mayor of Tampa were on scene. Helicopters were also in the air over the water. We drove to the boat launch adjacent to where the aircraft sank and the Tampa Bay Police Dive team was there as well as the Hillsborough County Sheriff Marine unit. My initial telephone interview with the FAA took place in a Tampa Dive team SUV on a Diver's cell phone and was with Herman Maddox.

The water landing occurred in Tampa Bay in approximately 12' of water depth. The landing was off the south end of runway 18-36 adjacent to the Davis Island Dog Beach and Boat Ramp. Water conditions were calm and water temperature was in the 70's.

Minor injury to the pilot included superficial scrapes to the right knuckles and left arm bicep. EMS took vital signs of the pilot at the rear bumper of the ambulance parked at 825 Severn Ave, Tampa, FL 33606 in front of the Tampa-Peter O' Knight Airport Terminal. No other injuries were identified.
