SEE ATTACHED STATEMENT

I am making the following statement relating the forced landing of Piper Lance N31678, PA31RT-300 on April 30, 2017.

The flight originated at noon time at KGIF (Winter Haven, Florida). After departure, I contacted Orlando approach for radar traffic advisories to KFXE. Flying at 2500 feet they transferred me to Miami Center, then to PBI approach, then to Miami approach, where we requested vectors for a practice ILS runway 9 approach, with information India.

We had been flying uneventfully with power set at 2200 rpm, 25 inches MP, mixture set to 50 degrees rich of peak EGT.

After talking to Miami approach I discovered the MP had dropped to 15 inches. I advanced the throttle forward with no response. I advanced the mixture and prop full forward. I switched the electric fuel pump on, checked the magnetos, switched the alternate air on and off several times, and switch the fuel tank selector to the other tank.

The engine was still running smoothly at reduced power. The multi probe EGT indicated all cylinders were firing. I tried to move the throttle back and forth, but it was binding. I didn't dare to pull it all the way back hard, for fear I would loose all power.

15 inches of MP is not enough to maintain altitude. It takes 19 inches or more in slow flight.

I declared an emergency with Miami approach and turned direct KFXE. Approach pointed out the Sawgrass Expressway. I told them we were not going to make it. I was able to stretch the glide to reach the levy road at the edge of the Everglades. At the last possible moment, just before stalling I made a turn to the right to line up with the narrow road on the levy, at the same time I asked Jane in the left seat to switch the gear down as I pulled full flaps. I was confronted with gusty cross winds from the left, before I could get the wings level from the right turn to line up. After what I thought was the the right main gear touching down, while still in the right turn, I asked Jane to switch off the magnetos and the master switch. The gear did not have time to extend. It was the step to the right wing dragging, which ended up braking off.

If I had just a few more seconds, I could have managed it with a successful landing, but I was out of time, out of altitude, and out of airspeed.

I struggled to keep it on the narrow road for a hundred feet or so, but lost the battle with the left cross wind when the step dug in and pulled us off the road to the right. The airplane came to rest 120 degrees heading to the right of touch down with the landing gear out of sight in the swamp. We abandon the airplane over the wing and stepped onto dry ground.

What caused the power to drop from 25 inches to 15 inches and the throttle to bind is the mystery that needs to be solved.

Before leaving the scene I checked the airplane, removed life vests, head sets, fire extinguisher Registration and Airworthiness Certificate. The throttle lever, prop control lever, and mixture lever remained full forward. I removed the key and locked both doors. I turned the key over to the Sheriff's Department to give to the FAA investigator.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

NO COMMENT UNTIL FAILURE OF THROTTLE IS INVESTIGATED

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
