Narrative Statement:

Was hovering at 100' with the long line in the LZ waiting for the groundman to disconnect some conductor I brought to the LZ. My head was out of the helicopter watching the load. Helicopter began to settle and naturally I began to slightly raise the collective. Then I noticed something wasn't right and brought my head into look at the panel. The helicopter was still settling, horn came on, and engine noise was quiet. Entered an autorotation with an aggressive forward cycle, right pedal because of left rotation, and down collective. Immediately began to flare because of the low altitude, tail rotor contacted a tree and I pulled collective to cushion landing. Then the helicopter contacted the ground and

Blades contacting the tail boom. the engine was not running. I proceeded to Flip switches off in preparation for electrical fire. Turned the power back on to contact the crew and let them know I was ok. looked over gauges. ~~all~~ All looked normal and fuel was at 100 lbs. Engine released a little white smoke for a few seconds. Flipped switches off again and climbed out of the helicopter.
