Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Aircraft Test: out and runup were normal. Normal departure followed by three touch & go's. We then departed the pattern and did a steep turn each direction. After that, we did a stall in the clean configuration. Upon completion of the stall, about 15 to 20 seconds later, the front engine surged to full power and then shut off. The rear engine was still running at this time. I asked Austin to proceed directly to the airport and maintain altitude as best he could. We were approx. 8 miles out at this time. I began running checklist and turning on boost pump and cycling tanks to no avail. Somewhere around two miles out we had the rear engine shut off. I then took controls and maintained min speed to controlled landing in treetops.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Fuel was inspected and gauges showed better than $3/4$ tanks of fuel. It looked more like half tanks, and based on owner receipts of filling the tanks up and his account of time flown, we should have had about 2 hours of fuel. We flew for approx. :30 before losing engines. According to FHA only one Aux. tank had about 6 Gallons of fuel and Cessna tested and said gauges would have read excessively high. There was a service bulletin issued for gauges in this aircraft.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
