NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Robert E. Waring was conducting an Aerial Application mission on the morning of July 19, 2017. He was operating a Grumman G-164 AgCat, N691Y, overtop a corn field in rural Kent County Delaware. Between 07:40 and 09:00, the pilot and aircraft successfully dispensed two loads of field corn chemistry over the target. At 09:10, the plane and pilot departed Johnson's Airport (DE09) with the third load of chemistry. Approximately 09:25, we (Air Enterprises staff) received a call from a local farmer that the aircraft had crashed in the field adjacent to his target application site. At the crash site, the aircraft debris was in one concentrated location. Four powerlines were on the ground, broken and pulled from the electric poles. Firefighters and first responders cut the canopy of the aircraft to gain access to the pilot. The pilot was conscious and assisted the first responders in his extraction.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I recommend agricultural fields to be sprayed with the crop rows when ever possible and/or feasible. This aids the pilot in keeping his focus "outside" the aircraft, on the mission's objective, and it's obstacles. Agricultural pilots must avoid "target fixation" when on a spray run. Lastly, Ag pilots conduct a "pre-site" survey before aerial application operations commence. I believe a pre-site survey before each load may have benefited the pilot and helped prevent this accident.
