Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right wing and wing strut had structural damage. Right main wheel was folded back. Nose and underbelly where damaged as well as the propeller being bent. Windscreen had a hole in the right side. Passenger door was torn off on impact. Both seats had broken mounts and the instrument panel had a large dent in it from impact by the pilot.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pilot was performing touch and go wheel landings at KCQF around 1645 local time. On climb out and making a left crosswind turn at approximately 400 feet MSL the engine quit. The pilot applied carburetor heat and check the position of the fuel selector valve as he lowered the nose to maintain flying speed and maneuver to make an off airport landing in a cotton field. The cotton was about three feet in height and the pilot was aligning the aircraft with the rows when the engine started to produce power. The pilot applied full throttle and began to climb as the engine sputtered and again quit. Again the pilot lowered the nose and was preparing to land in the cotton field when the engine again started to produce power. At this time the rear instructor rated pilot stated that he was taking over flying the aircraft. The pilot in front handed the controls over to the instructor rated pilot. This time the engine seemed to be making better power and he began a climbing turn toward KCQF to try and land on runway 1. After making about a ninety degree turn to the west, the engine quit and there was insufficient altitude to recover.
