Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

N1585C sustained damage to the right wing tip, right aileron, right horizontal stabilizer, right elevator and right empennage adjacent to the right horizontal stabilizer. No other damage to personal property.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This correspondence concerns the events of August 20, 2017.

I had previously flown my Cessna-180 N1585C into E2B Parlin Field, Newport, NH. from KRUT To have an ADS-B installed. The flight was normal with normal brake function.

On August 20, 2017 I was returning to KRUT after the installation was complete. The weather was CAVOK with winds 5-10 kts out of the North. Runway was dry.

The pre-flight was normal, the brakes were normal during the run-up and normal during the initial taxi-out to runway 36. There was a long back-taxi on 36 during which time I used only tailwheel steering for direction control. As I was 150-200 feet from the end of runway turnaround area I started to slow my taxi.

I applied brakes to slowdown. My left brake was normal, my right brake pedal went completely to the floor. I believe I was near the runway end-lights when I started to go around to the left on the runway. I believe I went around twice in an attempt to stop adding some throttle on the second turn attempting to get some rudder authority which in hindsight exacerbated the left turn. I exited runway 36 to the west side. The area is fairly narrow on either side of the runway at that point. I applied full left rudder and left brake to avoid exiting the sandy grass area into the trees and the river on the west side of runway.

I did ground loop the plane at that point striking the right wingtip and right horizontal stabilizer. The impact did not feel hard, I was surprised to see the extent of the damage to the plane.

The plane came to rest on the runway.

I radioed Unicom for help. I had help clearing the plane off the east side of RWY 36. Heath Marsden towed the airplane back to the Edmonds aviation ramp.

I contacted the NTSB approximately 2am on 8/21/17

I spoke with Dennis Diaz of the NTSB later in the morning of 8/21/17. He notified the FAA and local authorities.

I am the sole owner and only occupant during the incident. There were no injuries and there was no damage other than to N1585C

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe the cause of this accident was the failure of the right brake. The FAA found no fluid in the right cylinder and no brake authority. All prior brake applications were normal. In my initial report I reported the right brake was soft. In clarification, soft meaning the left and right pedals were not exactly lined up. I have flown many Cessna models before and found this a common trait.

This accident was exacerbated by my adding some throttle in an attempt to get rudder authority in an attempt to miss runway lights. In hindsight I would have let the airplane run itself out even if it meant impacting the runway end lights.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

BRAKE FAILURE ON RIGHT SIDE. THEY ARE CLEVELAND BRAKES
ANNUAL COMPLETE 6/12/17. NO MECHANICAL WORK COMPLETED
ON BRAKES SINCE ANNUAL. BRAKES OPERATED NORMAL
UNTIL AUGUST 20.
