NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After a standard pre-flight inspection, obtaining weather from ASOS and fueling the aircraft, a VFR flight plan to MYAM was filed for a departure from KCOI at 0930. Clear skies were noted with VFR conditions, winds observed on the field were light and variable. The traffic in the pattern was utilizing runway 11, so this was chosen for departure. After routine takeoff, the aircraft was noted to have a partial loss of power above 20 feet MSL. Applying rudder correction, the aircraft drifted left of runway heading and descended under power, making an off runway landing into the shallow water of the Banana River. All persons made an uneventful exit without any injuries and no damage to property of others. The aircraft was upright and partially submerged in shallow water where observers used a small boat to return all passengers to the airport. Local authorities and the FAA were then made aware of the events that transpired.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

If more extensive run-up were to have included holding 2000 RPM for several minutes, any loss of power may have been detected which was not noted after 60 seconds. In addition, an airport pattern flown solo prior to boarding passengers may have revealed partial loss of power during climb with greater opportunity to recover altitude.

At 8am on Sunday September 3, 2017 I checked weather and filed a VFR flight plan with flight service center. I went to KCOI and found my hangar in its usual state and pulled N544DG out of the hangar for my standard preflight inspection. I found the fuel to be at 10 gallons on each tank and taxied the AC to the fuel pump to add 30 gallons on each side. Fuel was inspected and strained before and after buying fuel and it was found to be blue and had no water or particulate matter noted. Oil was just below 9 Qts and 1 Qt was added. Weight and balance was within limits with 4 adult passengers and 100 lb. luggage. Preflight runup was all within normal limits with a drop of 150 RPM on each magneto. ASOS revealed winds from 350 at 5 knots, however observation of the windsock revealed winds were light and variable leaving either direction of flight available. A Cessna was practicing touch and goes utilizing Runway 11, so that runway was used for departure. Two notches of flaps were set and a smooth departure noted, rotating at 80 knots at $\frac{2}{3}$ runway length.

On climb out on runway heading, aircraft had a decrease of power (RPM) after leaving 20 feet altitude before gear was retracted. The plane was unable to climb without entering a stall, it drifted left of runway heading and after descending with engine at full throttle and made an off runway landing into shallow water 1000 feet from the end of the runway. No crew or passengers sustained injuries, all occupants exited the plane and were able to stand in shallow water. The nose of the plane was submersed in water and the rear fuselage and tail were dry above water. We were met by boats who assisted us to the airfield and 911 was called, the on-field sheriff's officers responded and assisted us in notifying aviation authorities.
