Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i>			

On September 5th, 2017 at approximately 6:30 PM CST I (Richard P. Hockin) pre flighted my Kitfox Aircraft N16KR for a local recreational flight. After warming the engine, completing my preflight check list I departed my home field to 210° south west. During climb out at approximately 300 feet AGL my engine lost significant power. I attempted to restore power by any and all means: adjusting throttle setting, check choke control, etc. Proceeded in flight for approximately 200 yards and engine ceased running entirely. As I had previously practiced dead engine approaches at altitude I realized that I needed at least 400 feet AGL to make a turn back to the field with any hope of safely landing. I now had descended to 200 feet AGL. I slowed aircraft to approach speed, evaluated the terrain, I had tall trees directly ahead so I banked hard to the right and prepared to land in a clear portion of the terrain. I touched down at approximately 45 MPH. I rolled approximately 30 yards and struck a log. (The field had been clear cut of pine trees several years ago and was not completely clear of debris, stumps, etc.) The aircraft went inverted. I immediately shut off my auxiliary fuel pump, mags, and departed aircraft. I was not injured. the aircraft suffered substantial damage. The horizontal stabilizer struck the ground, damaging it and bending the rear structure of the aircraft aft of the cabin. The right gear leg folded up into the cabin structure damaging it as well (bent and broken tubes). The left gear leg was also damaged. Left wing fabric was torn and all the ribs and spars were bent beyond the outer strut attach point. The right wing was essentially intact but the strut attach heim joints were bent. The windshield sky light assembly was broken. The seat base was broken. The radiator exhaust scoop, radiator, and engine exhaust were damaged. The 3 blade propeller had two of its blades broken.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

After reporting the incident to the NTSB and the FAA. I waited for the FAA investigation to be completed before trying to determine what was the cause of the engine stoppage. The engine started and responded to throttle normally. I could not determine the reason for the stoppage. It acted like fuel contamination but I found no evidence of that. I am very particular about fuel. I purchase only non ethanol fuel of the manufacturer's octane rating and all fuel is filtered through a special funnel that will not allow water to pass thru it. I also check every batch of fuel for ethanol. I also replace all rubber fuel lines annually. I will continue this practice.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
