Thursday morning of September 14, 2017 I prepared a cross country flight departing KAUG to KMVM, KLRG and back to KAUG. I had gone over my flight plan with my instructor at Maine Instrument Flight. I called Flight services to file my VFR flight plan and everything was good to go. I conducted a preflight inspection of the aircraft I had full fuel tanks and everything seemed ok.

I departed KAUG at roughly 10:15 and was on my way to KMVM. Everything was going as planned. About 10miles from KMVM I began descending to pattern altitude and made a radio call. I joined the downwind for runway 35. Everything was still going smooth. As I began my turn for the base leg my engine started running rough. I started a flow check to see if I could resolve the issue. I had mixture full rich, carb heat on, and fuel boost pump on, at that point the engine failed completely. I cut the base leg at a 45 straight for the runway pitching for best glide rate.

As I got closer I realized I was not going to make the runway. There is a small grassy area just before the runway. I made the decision to go for a soft field landing and roll onto the runway. I touched down on the grass trying to make it soft as possible and keep the nose wheel up. The ground was much softer than expected and the landing gears sank into the ground causing the nose to hit hard and break the landing gear off. The aircraft then spun around facing the direction I was coming from. I took a minute to gather myself and realized I was leaking fuel. I shut everything down and moved away from the aircraft. At that point bystanders rushed out to see if I was ok.
