Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft suffered damage to the left prop, and left control surfaces as well as bottom skin on the left side rear of the rear door

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departure was from 5W4, Raeford, NC at approximately 1:00 PM EDT. Weather briefing was obtained via Fore Flight briefing service. Fuel was added to meet en route and reserve requirements. No other service was taken. Destination current weather was obtained prior to arrival at TVI, via AWOS. Flight was uneventful until landing gear extension was initiated.

At normal pattern altitude and speed the landing gear extension was initiated. The down and locked indicators for the nose and right main came on and the indicator for the left main did not. A whining sound was heard in the cabin, most likely the hydraulic pump running. Multiple attempts were made to get a down and locked indication by recycling the gear switch. At that point the emergency gear extension was initiated. There was no change to the indicator. TVI was contacted by radio and requested to watch a fly by and verify the gear was down. ground personnel said the gear appeared to be fully extended. Passengers were briefed and a normal landing was made. No problems occurred during the initial roll out. At approximately 30-40 kts, the left main landing gear collapsed, causing the left wing and prop to strike the runway. The aircraft made an immediate turn to the left and skidded off the runway onto the apron. Passengers were told to exit immediately. Pilot turned off fuel selectors and all electrical power and exited the aircraft.

There was damage to the left wing, left engine and prop, left belly skin, left stabilator tip, and rear tie down. There was no damage to anything on the ground.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

According to the on site AI there is no way this could be foreseen or prevented.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)**Was there Mechanical Malfunction/Failure?** ☐ Yes ☒ No*(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)*

According to the AI on site, a piece of debris of some kind prevented the landing gear down lock from fully locking the gear down. No mechanical malfunction of any part was the cause.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Weather at the time of the accident was via local KTVI AWOS. There is no way at the present time to get the actual weather conditions as reported at the time. Weather was not a factor in any way.

Engines were factory overhauled and installed on the aircraft at the same time as the new props as part of an upgrade to larger engines and three blade props, I have no total time for them. Time on both engines since factory re-manufacture and props since new is 450 hrs.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
