Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Prop strike, belly pan and landing gear doors damaged, several antennas scraped off, step bent, and gear transmission damaged

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Events leading up to gear up landing in Mooney N5254G on 12/21/17. Please keep in mind that I was not paying particular attention to detail such as specific time, since I was not planning on detailing this chronology at a later point in time.

- I departed from BKW (using flight following) heading to Darlington, SC; for a planned fuel stop at KUDG. Flight was clear and calm. 9,500 altitude.
- Topped off both tanks, walked around, stretched, played with my dog, and used the restroom.
- Departed KUDG and headed to FL using waypoints (using flight following) to Winter Haven KGIF where I turned and headed direct to Venice. The route was selected to avoid Tampa and Jacksonville airspace.
- The AWOS at VNC was inoperable and Tampa advised of Sarasota conditions which were fine.
- Slowly reduced altitude from 8,500 to around 4,000 after turning at KGIF to get under a layer of scattered clouds that I could see ahead of me. Flew approximately that altitude until descending lower for Venice approach and landing.
- I dropped my gear at 10 miles out (I think that I did, that is my routine) to slow down. Was planning on a straight in to Runway 23. Still on auto pilot.
- Hand flying at this point, I continued on toward VNC at 1,200 AGL dodging clouds using my Garmin 530 and Foreflight as backup to stay on course. As I approached VNC, I heard a Cessna call for pop up IFR clearance to VNC, he was in sea fog.
- I dove low to stay under some rolling clouds/ sea fog and Tampa center told me to climb immediately and follow the Cessna and to be careful because I was overtaking him and that he was having difficulty tracking me so low.
- I climbed to approximately 2,000 and was instructed to follow the Cessna into VNC.
- With the fog literally rolling about and the Cessna in sight, I realized how lucky I was to have the Cessna to follow into VNC.
- I was very intent on keeping my eye on the Cessna for fear of losing him in the fog should it shift again.
- Went to full flaps and descended for final. I turned on speed brakes to further reduce speed. I pulled throttle out too far to avoid slowdown in order to avoid Cessna on the runway. The throttle horn alerted me that I had overcorrected the throttle to try not to overtake the Cessna. I applied a small amount of throttle and horn stopped.
- All looked good on final. Runway lights were clear, no fog impeding my vision, and the Cessna was turning off the runway when I crossed the numbers for landing on 23.
- Pulled throttle and focused on the runway horizon keeping attitude level and staying centered on alignment while dissipating speed (about 60 the last time that I looked at the speedometer).
- Expecting a "greaser" landing because the flare and float were so good; the next thing that I heard was scraping noise. I immediately shut off fuel, but left lights turned on so that I could see where I was heading.
- The skid was eerily smooth and quiet, and alignment remained perfect. As soon as I stopped, I radioed what happened to VNC.
- After realizing what just happened, I killed all electrical power to further reduce risk of fire, got my dog and climbed out of the plane and got away from it.

- I have never been in a car wreck or had anything like this happen to me, so I took a minute to assess the situation.

- There was no fire or flame, so I went back to the cockpit a got my iPad to get phone number for FBO.
- Called and told attendant what happened, she asked if I could push it off the runway. Negative.
- At that point she called a Venice City Official and he came to the scene to help.
- He called in the incident to the FAA and I gave the FAA representative my personal information.
- I unloaded all my personal gear and went to FBO with airport official to wait for my ride.

I had intentionally waited until I felt that I was more than capable of flying my plane safely and familiar with its operations before taking this trip. Many of the 50 hours that I have logged in N5254G were with a mentor pilot just to critique my routines.

Since the incident, I have received additional flight and classroom training from a Mooney pilot / CFI.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

If I had the day to do over again, I would consider doing the following:

- 1) Fly my initial planned approach for straight in to runway 23 using auto pilot to control the plane until I could see the runway or decided to abort landing.
- 2) Fly around out of the pattern, regroup, gather my thoughts, and try to land.
- 3) Divert to Sarasota where the weather was reported to be clear, no sea fog rolling about. By design, I had 2.5 hours of fuel remaining on board when I arrived at VNC, I did not need to land when I did.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I do not know at this time.
